The motor vehicle crash fatality rate is higher for American Indians than for any other ethnic or racial group in the United States. And, even as the number of fatal motor vehicle crashes decreased in the nation as a whole from 1975–2013 by approximately 21 percent, on American Indian reservation roads motor vehicle crashes increased by about 35 percent.

“These are huge disparities,” says Associate Professor Kathryn Quick. “Clearly, this is an issue that needs to be explored.” In a project sponsored by the Roadway Safety Institute at the University of Minnesota (UMN), Quick and Research Associate Guillermo Narváez, both with the University’s Humphrey School of Public Affairs, are collaborating with American Indian communities to better understand the transportation safety risks on tribal lands and develop strategies to mitigate these risks.

Quick and Narváez are focusing on gathering on-the-ground knowledge about the nature of roadway risks and options to improve safety on reservations in Minnesota. “We’re also actively and intentionally trying to build and sustain relationships with tribal communities to contribute to their efforts to address these kinds of issues over the long term,” Narváez says.

The researchers are reviewing crash data, coordinating with Minnesota’s Advocacy Council on Tribal Transportation, and conducting interviews with key stakeholders. So far, they have had discussions with 12 tribal governments to discuss their tribal transportation concerns. That has grown into collaborations with four tribal governments: the Red Lake Band of Chippewa, Leech Lake Band of Ojibwe, Fond du Lac Band of Lake Superior Chippewa, and Mille Lacs Band of Ojibwe.

In those communities, Narváez and Quick are interviewing people responsible for road construction and maintenance, law enforcement, injury prevention, and emergency response on the reservation; professional drivers who know the roads particularly well; and residents. They have interviewed more than 120 key stakeholders and surveyed about 240 other people by tabling at 9 community events. Collectively, the study participants comprise a broad variety of viewpoints that has produced rich data about what local experts know about the sources of risk, how they manage those risks, and what they recommend to improve safety, Quick says. From these participants and from other tribal land locations and researchers, they are also gathering success stories about improving roadway safety.

Preliminary findings suggest that tribal transportation safety problems may not be so different from rural safety problems, except for a much greater concern for pedestrian safety and the complexities of coordinating between the tribal governments and other jurisdictions.

Many reservation residents, by choice or necessity, travel on foot to get around in reservations, and several tribal governments are actively promoting walking, jogging, and biking for their recreational and health benefits. However, people feel unsafe because of narrow road shoulders, poor lighting, vegetation, or animals. In addition, there are many concerns that

**Tribal Transportation Safety Planning Project**

The National Indian Justice Center (NIJC) is proud to announce that it has been contracted by the La Jolla Band of Luiseño Indians to administer the **Transportation Safety Planning Project for California Tribes**. Joan Harper, the Transportation Safety Planning Project Coordinator, will coordinate transportation safety plan training and technical assistance for development of tribal transportation safety plans as well as other subjects including long range transportation plans, conducting road safety audits and pedestrian safety audits. The project goal is to increase the number of tribal transportation safety plans in California and to make California tribes more competitive for tribal safety set aside funds. Finally, to assist this project, NIJC and UC Berkeley's SafeTREC have partnered to develop training and an online tool for California tribes to access their safety data from SWITRS. For more information about these projects, e-mail joan-harper@nijc.org or go to the NIJC project website at: [http://www.nijc.org/projects.html](http://www.nijc.org/projects.html).

**Traffic Safety Factsheet Rural/Urban Comparison of Traffic Fatalities 2015**

*From NHTSA Traffic Safety Facts, April 2017*

**Key Findings**

Of the 35,092 motor vehicle traffic fatalities in 2015 there were 17,114 (49%) that occurred in rural areas, 15,362 (44%) that occurred in urban areas, and 2,616 (7%) that occurred in unknown areas.

According to the 2015 American Community Survey from the U.S. Census Bureau, an estimated 19 percent of the U.S. population lived in rural areas. However, rural fatalities accounted for 49 percent of all traffic fatalities in 2015.

Rural traffic fatalities decreased by 28 percent from 23,646 in 2006 to 17,114 in 2015. Urban traffic fatalities decreased by 18 percent from 18,791 in 2006 to 15,362 in 2015.

In 2015 the fatality rate per 100 million vehicle miles traveled was 2.6 times higher in rural areas than in urban areas (1.84 and 0.71, respectively).

Of the 17,114 rural traffic fatalities in 2015 there were 4,758 people (28%) killed in speeding-related crashes. Of the 15,362 urban traffic fatalities in 2015 there were 4,171 people (27%) killed in speeding-related crashes.

Rural alcohol-impaired-driving fatalities decreased by 34 percent from 7,493 in 2006 to 4,915 in 2015. Urban alcohol-impaired-driving fatalities decreased by 24 percent from 5,921 in 2006 to 4,474 in 2015.

The 2015 National Occupant Protection Use Survey (NOPUS) observed that the seat belt use rate among front seat passenger vehicle occupants in urban areas was 89.4 percent, and rural occupants were observed to have a use rate of 86.8 percent.

Based on known restraint use in fatal crashes, 50 percent of rural passenger vehicle occupants killed in 2015 were unrestrained as compared to 46 percent of urban passenger vehicle occupants killed.

**Distracted Driving 2015**

*From NHTSA Traffic Safety Facts, March 2017*

**Summary**

The National Highway Traffic Safety Administration (NHTSA) works to reduce the occurrence of distracted driving and raise awareness of its dangers. This risky behavior poses a danger to vehicle occupants as well as pedestrians and bicyclists. Driver distraction is a specific type of driver inattention. Distraction occurs when drivers divert their attention from the driving task to focus on some other activity. Oftentimes, discussions regarding distracted driving center around cell phone use and texting, but distracted driving also includes other activities such as eating, talking to other passengers, or adjusting the radio or climate controls. A distraction-affected crash is any crash in which a driver was identified as distracted at the time of the crash.

- Ten percent of fatal crashes, 15 percent of injury crashes, and 14 percent of all police-reported motor vehicle traffic crashes in 2015 were reported as distraction-affected crashes.
- In 2015, there were 3,477 people killed and an estimated additional 391,000 injured in motor vehicle crashes involving distracted drivers.
- Nine percent of all drivers 15 to 19 years old involved in fatal crashes were reported as distracted at the time of the crashes. This age group has the largest proportion of drivers who were distracted at the time of the fatal crashes.
- In 2015, there were 551 nonoccupants (pedestrians, bicyclists, and others) killed in distraction-affected crashes.

To read the full report go to: [https://crashstats.nhtsa.dot.gov/Api/Public/ViewPublication/812381](https://crashstats.nhtsa.dot.gov/Api/Public/ViewPublication/812381)
drivers who are not from the reservation do not expect or antici-
pathe encountering so many pedestrians in some locations, as well as concerns about congestion and speeding during peak tourism periods.

Kade Ferris, Transportation Planner with the Red Lake Tribal Engineering Department, says that the researchers’ work has allowed for “an unprecedented and useful integration of disparate types of data into a more comprehensive, robust picture, leading to the development of a comprehensive tribal transportation safety plan for the Red Lake Nation.” Some of these data have helped identify pedestrian safety concerns along Minnesota Highway 1, the main east-west highway through the reservation, where people are moving back and forth among the residential areas, stores, and community facilities. According to Ferris, the data collected through this research collaboration helped the tribe to apply for and receive funding from the State of Minnesota to develop a new walking trail and street lighting to provide a safer walking environment for the reservation’s residents. The researchers are also working with the Red Lake Band DOT to elaborate a protocol to analyze safe routes to school to support their request for improvement funds.

Tribal transportation leaders and others have not identified alcohol- or drug-impaired driving as a distinguishing, special feature of roadway safety in reservations Quick notes. “We hear very mixed statements about this. Some people indicate that impairment is not a particular concern. Others indicate that it is, but emphasize they do not see a difference between on- and off-reservation patterns.”

The data indicate that collaboration among law enforce-
ment agencies is key not just for patrolling and responding to incidents, but also for monitoring and prior-
itizing safety concerns. The team has heard many positive stories, but also that there are “some is-
ues… around data quality, data sharing, and data interpre-
tation to set priorities for safety resources,” Quick says.

Quick and Narváez plan to complete their analysis of reservation safety data, expand into non-
Minnesota sites, and build research and teaching capabilities about tribal governance at the Humphrey School.

About This Project

“Collaborating with American Indian Communities to Re-
Interpret and Strategize About Transportation Safety Risks in Tribal Lands” is led by principal investigator Kathryn Quick and co-investigator Guillermo Narváez with the Humphrey School of Public Affairs at the University of Minnesota (UMN). More information can be found at: www.roadwaysafety.umn.edu/research/search/
projectdetail.html?id=2015031.

The Roadway Safety Institute is the Region 5 University Transportation Center focusing on user-centered transportation safety systems. The Institute is a consortium led by the UMN; other members are the University of Akron, the University of Illinois at Urbana-Champaign, Southern Illinois University Edwardsville, and Western Michigan University.

This article was featured in the January 2017 issue of the USDOT’s UTC Spotlight newsletter. And was reprinted with the permission of the author Kathryn Quick, Associate Professor, Humphrey School of Public Affairs, University of Minnesota.

Safety Center Stakeholder Group
Member Spotlight
By Janet Leli, Safety Sidekick Newsletter, Vol. 7, April 2017

Our first issue of 2017 brings us another opportunity to spotlight a member of our Stakeholder Group. We are happy to share with you some information about Byron Bluehorse, who is an Assistant Professor with the University of Alaska Fairbanks, Tribal Management Program.

Byron Bluehorse is an enrolled member of the Navajo Nation. He holds a bachelors degree in University Studies and a masters degree in Community and Regional Planning from the University of New Mexico. From 1993-1997, Byron served in the U.S. Marine Corps, an experience which led him to Japan, Panama, and the Philippines. After receiving an honorable discharge, Byron returned home to New Mexico to

Notes taken from Fond du Lac members while talking about their experiences and impressions of the roads they drive in the reservation.
pursue a higher education. While in graduate school, Byron served as an AmeriCorps volunteer where he helped to establish the University of New Mexico Tribal Service Corps. Byron's past employment experience includes the U.S. Equal Employment Opportunity Commission, U.S. Forest Service, Resource Center for Raza Planning and Bureau of Indian Affairs (BIA). After moving to Alaska in 2005, Byron began working as a Contracts and Grants Specialist for the BIA. In this capacity, he provided technical assistance in the area of P.L. 93-638 Indian Self-Determination contracting to tribal entities in the Interior and Arctic Slope regions. Byron currently lives in Fairbanks and is a member of the American Planning Association.

Becoming involved in safety

While working for the Alaska Tribal Technical Assistance Program Center (AKTTAP), Byron met many Tribal planners who were passionate about shedding light on the need for more safety opportunities. Those mentors opened his eyes to the safety arena. AKTTAP eventually hosted a Regional Safety Summit, which many Tribal Governments participated in, to raise awareness of available opportunities and technology to improve and develop new programs. They also worked with several Tribes to develop safety plans. AKTTAP also held a peer-to-peer safety workshop session where they utilized Tribal input to create a safety website (tribalsafety.org) where Tribes can access numerous resources.

Byron shared an example of a safety activity that he has been involved with that he feels could be a best practice for others. He has participated in several Road Safety Audit (RSA) teams, one of which led to a report in which he served as lead author. Byron shared that being a part of these teams has opened my eyes to the history, process, and benefits of an RSA. He strongly encourages anyone interested in RSAs to take RSA training and participate in an RSA audit. Such opportunities provided him with a better understanding of the built environment and the movement of people. He also developed a greater appreciation for low-cost options such as roadway reconfiguration, also known as Road Diets.

One recommendation that Byron would like to share with the safety community is to listen to your clients and the community, as they have the local knowledge of the roads that they drive daily and can add valuable insight to safety concerns. Quantitative data can help, but gathering local knowledge and stories increases greater success to find and implementing counter measures that could be used.

Te-Moak Western Shoshone Tribe
Putting Best Practices to Use
By Carrie Brown, Western TTAP Safety Circuit Rider

It is no secret that American Indians and Alaska Natives die in motor vehicle crashes at higher rates than other Americans. Adult American Indians are 1.5 times more likely to die in motor vehicle crashes than that of whites or blacks. Furthermore, American Indian infants under the age of 1, are 8 times more likely to perish in motor vehicle crashes than whites or blacks. What do we do about this? The first thing many people think about is changing the physical roadway to make it safer. Engineering can be a great way to improve safety, however it can also be time consuming and expensive. There are other public health based strategies that can be used to address this alarming death rate that are both effective and cost efficient. Best practices in motor vehicle safety that are evidence-based are the answer.

Best Practices in transportation are the cornerstone of traffic safety. Best practices are procedures or initiatives that have been shown through research and experience to produce the most effective results. Communities can incorporate best practices into their transportation safety plans for optimal results at low cost. A step by step guide titled “Tribal Motor Vehicle Injury Prevention Best Practices Guide 2016,” was developed by the Centers for Disease Control and Prevention. This guide details how some tribes have implemented evidence-based initiatives into their communities and the lessons they learned along the way. You can access the guide at: https://www.cdc.gov/motorvehiclesafety/native/best_practices_guide.html.

One example of best practice put into use happened on April 5th, 2016 when the Te-Moak Western Shoshone Tribe passed an ordinance addressing seat belt and child restraint use on their tribal lands. Currently, the state of Nevada where the tribe is located, has a secondary seat belt law. A secondary seat belt law only allows law enforcement to issue citations to drivers for failure to wear their seatbelt if they have been pulled over for a separate offense; failure to wear a seat belt is not a reason to be pulled over and issued a citation alone. However, if you are unbelted and driving on Te-Moak tribal lands, you can be pulled over and issued a citation. Their new ordinance also incorporates public health best practices by requiring children to stay rear-facing in an appropriate car seat until the age of 2 and all children must be in an appropriate child restraint until they reach 57” in height. Additionally, these citations are now considered primary moving violations under tribal law and can be prosecuted in tribal court.

Reports from Te-Moak Traffic Safety Specialist Intern, Toni Roloson, state that support from tribal council was unanimous to protect tribal children. As a mother, she feels that children are our most important asset.

If you would like information and resources on how to incorporate low-cost, life-saving, best practices into your community, contact Carrie Brown, WTTAP Safety Circuit Rider at 775-432-4438 or cbrown@nijc.org.
Making Transportation Safer for Every Pedestrian

Getting people to their destinations safely and conveniently is the goal of the safe transportation for every pedestrian—or STEP—program the Federal Highway Administration is encouraging agencies and communities to adopt during Every Day Counts round four (EDC-4).

STEP features proven, cost-effective techniques that can reduce pedestrian fatalities at uncontrolled crossing locations. Pedestrians account for more than 17.5 percent of all traffic fatalities. More than 66 percent of pedestrian fatalities occur at non-intersection locations such as midblock areas, and about 16 percent happen at intersections with no signals or stop signs.

“With STEP, we’re looking at enhanced crossings at uncontrolled locations, whether at intersections or midblock crossings,” said Peter Eun, FHWA transportation safety engineer and a leader of the EDC-4 STEP team. “We can have a big impact on safety in those areas.”

In addition to improving safety and helping agencies make targeted investments that address a national pedestrian safety problem, the STEP countermeasures can enhance the quality of life for pedestrians.

“We want to help provide safer crossings, but also improve connectivity of the pedestrian network since walking is the oldest form of transportation,” said Eun.

Five Safety Techniques

STEP includes five countermeasures to get pedestrians safely across the road at uncontrolled locations. “These are proven techniques. We know they work and can drive down fatality numbers,” said Keith Sinclair, FHWA transportation safety engineer.

- **Crosswalk visibility enhancements**, such as crosswalk lighting and enhanced signing and marking, help drivers detect pedestrians. “A large percentage of crashes happen at night, so lighting is an important factor,” said Eun.

- **Raised crosswalks** are a traffic-calming technique that can reduce vehicle speeds and encourage drivers to yield to pedestrians.

- **Pedestrian refuge islands** provide a safer place for pedestrians to stop at the midpoint of the road before crossing the remaining distance, which is particularly helpful for pedestrians with limited mobility.

- **Road diets**, also an EDC-3 innovation, reconfigure a roadway cross-section to safely accommodate all users. It can reduce vehicle speeds and the number of lanes pedestrians need to cross and create space to add new pedestrian facilities.

- **Pedestrian hybrid beacons** (PHBs) provide a stop control treatment at locations where pedestrian volumes aren’t high enough to warrant a traffic signal. They are a useful device for higher speed multilane roads. “It’s pedestrian activated and is only on when a pedestrian is walking across the roadway,” said Sinclair.

Communities Take STEPs

The North Jersey Transportation Planning Authority is among the organizations and agencies interested in pursuing STEP during EDC-4.

“Our home city of Newark is a pedestrian-focused city,” said Mary Ameen, the authority’s deputy executive director. “STEP is something we’re very eager to incorporate into the planning and programming in our metropolitan planning organization.”

Many communities and States are already benefiting from STEP countermeasures.

Safety studies conducted in Tucson, AZ, where more than 100 PHBs are in use, show that the technique reduced crashes by as much as 70 percent at some locations. “The pedestrian hybrid beacon was born in the city of Tucson,” said Kelly Morton, FHWA safety engineer. “It originated in Tucson’s efforts to develop unique and effective safety crossing treatments.”

Using road diets to enhance safety is a standard practice in 21 States and Washington, DC, and continues to attract widespread interest across the country. In Michigan, the Department of Transportation developed a road diet checklist to help planners analyze a road segment for potential reconfiguration. Michigan has road diets totaling more than 50 miles on 60 State corridors and nearly 90 miles on 94 local corridors.

Taking Data-Driven Safety Analysis to the Local Level

New tools help agencies target transportation investments and cut crashes

After generating widespread interest among States during Every Day Counts round three (EDC-3), data-driven safety analysis (DDSA) is back for an encore in EDC-4—this time with an added focus on local deployment.

During EDC-3, more than 40 States implemented DDSA at some level, and 44 States made 145 technical assistance requests to the Federal Highway Administration’s DDSA deployment team. This strong interest was a driving factor for including DDSA in the 11 EDC-4 innovations FHWA is promoting in 2017 and 2018.

“We’re honored and excited that DDSA was included in this next round,” said Jerry Roche of the FHWA Office of Safety and a leader of the EDC-3 and EDC-4 deployment teams. “Agencies want to make their road systems as safe as possible, and once they learn about these new analysis tools, they are eager to start using them.”

DDSA is the application of the latest generation of software tools for analyzing crash and roadway data. These tools quantify expected safety impacts, enabling agencies to make more informed decisions, better target their investments, and reduce severe crashes on roads.

For EDC-4, the deployment team will continue to help States incorporate DDSA into their processes, policies, and projects, but a new emphasis will be on assisting local agencies.

“In most States, around half of fatalities occur on the local system,” Roche said. “For EDC-4 we’d like to increase the number of local agencies that gain proficiency with the tools and, in turn, help them qualify for Highway Safety Improvement Program funding.”

Local Successes

Many local agencies have already implemented DDSA, with much success.

In Thurston County, WA, the public works department used systemic analysis tools to prioritize projects and better target their safety investments.

“We’ve been fortunate to use the Systemic Safety Project Selection Tool, and that’s allowed us to utilize a lot of data we already had,” said Scott Davis, interim county engineer. “By using the data to customize solutions, you’re focusing your energies where you can make the biggest difference to the community, in this case reducing fatal and serious injury crashes.”

The analysis allowed the agency to better identify at-risk locations on its system.

“We can look at that crash data and identify certain crash types that need to be addressed throughout the county,” said Matt Unzelman, senior civil engineer for Thurston County Public Works. “We’re able to look at parts of the county that need to address a certain collision pattern. Then, we can identify what countermeasures to use at those locations, sometimes before crashes happen. It’s a more proactive approach.”

In Maricopa County, AZ, the Maricopa Association of Governments—the regional metropolitan planning organization—worked with county agencies and FHWA to develop data-driven road safety assessments.

“We’ve implemented those road safety assessments on a regional basis. That’s been very important,” said Amy St. Peter, the association’s assistant director. “We’re using data out in the field to collect more information with a human factor expert to help us identify what behaviors, what environmental factors, what infrastructure contribute to those crashes and how we can mitigate those.”

The Minnesota Department of Transportation (MnDOT) used DDSA tools to develop road safety plans for each of its 87 counties.

“It was a partnership between the county engineers and MnDOT, as well as the Federal Highway Administration,” said Sue Miller, county engineer for Freeborn County. “We were able to sit down and say, ‘What can we do together to make this data-driven process work for us?’”

The analysis showed that half of fatalities across the State were on local roads, so MnDOT shared funding with the counties to help them implement the plans, based on the data.

“The DOT really understood that if you want to make a true safety difference, then we have to get that money down to the local level to start shifting the culture,” Miller said.

Ultimately, DDSA allows agencies to make safety investments with more confidence.

“We know that we’re saving lives,” said St. Peter. “It could be our friend, our neighbor, our co-worker, but we know that people are here and they’re healthy and they’re safe because of the work we’re doing.”

California Collaborative Long Range Transportation Plan (CLRTP) Factsheet

OVERVIEW: What is the CLRTP?

The Collaborative Long Range Transportation Plan (CLRTP) is an integrated plan that will feed the transportation needs of Federal Lands into Statewide and the Metropolitan Transportation Planning process. The agencies that are party to the plan include the following Federal Land Management Agencies (FLMAs): the National Park Service (NPS), Fish and Wildlife Service (FWS), USDA Forest Service (USFS), Bureau of Land Management (BLM), US Army Corps of Engineers (USACE), the Bureau of Reclamation (BOR), and the Presidio Trust. Through interagency coordination, the plan will establish common goals and objectives for maintaining and improving regional transportation systems (including roads/bridges rehabilitation, trails, and transit connector services) that provide public access, to, through and within Federal Lands. The CLRTP will also identify dual funding opportunities based on projects or needs that mutually benefit the FLMAs, State and local agencies and Tribal governments.

OBJECTIVES: What Is The Role of Caltrans, Local Agencies, and Tribes?

- Participate in defining statewide high-priority areas in your local jurisdictions that provide access to or within Federal Lands.
- Identify specific goals and objectives for managing these Federal Land areas and appropriate transportation access.
- Identify gaps, missing routes, accessibility issues, and inconsistencies in parts of your network that link to Federal Lands.
- Identify locations/corridors where your agency needs to work with federal, state, and other local partners to develop and implement transportation improvements to the regional transportation system for the enhancement of Federal Lands access.
- Identify where there is a nexus between need and dual funds leveraging opportunities

What Funding Programs are under CLRTP?

- The Federal Lands Transportation Program (FLTP) is the primary fund source under the CLRTP and its eligible recipients include: NPS, FWS, USFS, BLM, USACE, BOR, and the Presidio Trust.
  - $375M per year and approximately $8.6B projected over the planning horizon of the plan - 2040.
  - Funds are allocated to each of the agencies above and then distributed regionally or nationally – not by state.
  - Strategically targeted state and local investment at enhances Fed Lands access can drive more FLTP funding to CA.
- The Federal Lands Access Program (FLAP) is the companion program to the FLTP and its eligible recipients are state and local transportation agencies.
  - $270 million per year - $31M per year allocated to California or $713M over the life of the CLRTP.
  - Funds are allocated based on periodic calls for projects (approximately every two years).
  - Local match is required (11.47%), but FLTP can be if the FLMAs is willing to or is already making an investment on the same or connecting route.

- Other Fed Lands Programs
  - Tribal Transportation Program (TTP) - $465M per year and funds are allocated by Tribe or BIA region. Tribes already have plans and TIPs – need to identify places where there’s a need that is also eligible for FLTP or FLAP.
  - Nationally Significant Federal Lands and Tribal Projects - $100M per year or $2.3B over the life of the CLRTP. Program is authorized but it doesn’t yet receive dedicated funding. It is likely, however, that will be funded in the next authorization bill.

TIMEFRAME:

- Conduct outreach webinars (includes Tribal outreach) and Strategic Investment Area (SIA) validation: Jan. to Aug. 2017.
- Finalize Baseline Conditions, Performance Measures, & Financial Gap Analysis (FGA) – September 2017
- Scenario Planning Workshops – June to August 2017
- Draft Plan – September to December 2017
- Finalize and Adopt Plan – Winter to Spring 2018

The development and maintenance of safe roads on or near tribal lands is a key element in fostering healthy and sustainable communities. Notably, motor vehicle crashes are one of the leading causes of death or injury for Native people. According to the Center for Disease Control (CDC), American Indian and Alaska Natives are killed or injured in motor vehicle crashes at much higher rates than other Americans. It is estimated that on average, 2 American Indians or Alaska Natives are killed in motor vehicle crashes every day. Strategies to develop and maintain safe roadway safety issues as well as traffic, bicycling, and pedestrian crash and safety improvement contained in a TSA, many tribes are well-versed in implementing such improvements. Now, armed with tribal communities to identify safety issues as well as transportation planners and traffic safety engineers worked with tribal communities to identify safety issues as well as transportation safety experts by completing a transportation safety program. Through the assessment process, data, and recommendations contained in the plan can be used to justify and compete more effectively for funding and transportation improvement grants.

Tribal Transportation Safety Plans

One way tribes are addressing roadway safety issues is through the development of a Tribal Transportation Safety Plan (TSP). Typically, the transportation safety planning process uses a community-based approach to gain input from community stakeholders, technical transportation safety experts, and responsible as well as affected government agencies and jurisdictions. Key steps in the process involve gathering and analyzing roadway safety data, identifying safety issues, prioritizing needed improvements, and developing recommendations and strategies to secure funding to implement projects. Once a Tribe completes and adopts a TSP, the information, data, and recommendations contained in the plan can be used to justify and compete more effectively for funding and transportation improvement grants.

Tribal Transportation Needs Assessments

An effective TSP should be supported by safety data and analysis by Tribal staff and/or outside technical expertise. Tribes often utilize the assistance of transportation planners and traffic engineers to analyze and assess roadway conditions as well as traffic, bicycling, and pedestrian crash and safety data. A number of California tribes obtained the technical assistance of transportation safety experts by completing a Transportation Safety Assessment (TSA) through programs funded in 2009 and 2017, by the California Department of Transportation (Caltrans). Through the assessment process, transportation planners and traffic safety engineers worked with tribal communities to identify safety issues as well as possible technical solutions and improvements. Now, armed with the data, technical analyses, and suggested safety improvements contained in a TSA, many tribes are well-prepared to develop or update a TSP or long-range transportation plan.

FHWA Transportation Safety Planning Grants

The Federal Highway Administration (FHWA) provides grants to assist federally recognized Tribes in the preparation of a safety plan as well as other projects. Over 30 tribes in California and Nevada have received FHWA grants for safety planning. Grant applications for Fiscal Year 2017 are anticipated to be accepted starting in July 2017. Applicants will want to be sure to gather the necessary information and submit their applications before the closing deadline. Tribes interested in applying for the FHWA safety planning grant, can find more information at: https://flh.fhwa.dot.gov/programs/ttpsafety/tipsf.htm or contact Adam Larsen, FHWA Tribal Transportation Planning Safety Engineer, at: Ad- am.Larsen@dot.gov or 360-619-7751. To receive notices about this application period, add your contact information to the Tribal Transportation Safety website’s mailing list at: http://www.tribalsafety.org/News-Events/Mailing-List-Form.

Tribal Transportation Safety Planning Project

The National Indian Justice Center (NIJC) has been contracted by the La Jolla Band of Luiseno Indians to administer the Tribal Transportation Safety Planning Project for California Tribes. The project is focused on identifying existing and potential transportation safety planning projects and resources, gaps in tribal transportation safety and long-range planning activities and services, and training and technical assistance to close the identified service gaps.

Tribal Transportation Planning Survey

The Tribal Transportation Safety Planning Project is conducting a survey to assess the transportation safety and long-range transportation planning needs of all California Tribes. The survey is intended to identify the individual needs of tribes, aid in the preparation of appropriate technical assistance to tribes in the form of informational materials and services, and tailor topics and methods presented in the safety planning workshops to meet the needs of participants. The survey can also serve as an application for those Tribes interested in participating in workshops and receiving assistance through the Tribal Transportation Safety Planning Project for California Indians. The survey is available online at: https://www.surveymonkey.com/r/tribaltransportationplanning-survey.

HOT CARS Act of 2017 Will Prevent Child Heatstroke Deaths by Getting Much-Needed Technology into Vehicles

Many children needlessly die in hot cars each year – Summer brings extreme risk for these tragedies

Washington, D.C. (June 7, 2017). U.S. Representatives Tim Ryan (D-13th OH), Peter King (R-2nd NY) and Jan Schakowsky (D-9th IL) introduced the Helping Overcome Trauma for Children Alone in Rear Seats Act (HOT CARS Act of 2017, H.R. 2801), a critical piece of legislation that would prevent children from being needlessly killed and injured when unknowingly left alone in vehicles. The bi-partisan effort has already received widespread support from more than twenty of the nation’s leading public health, consumer and safety organizations, as well as an expert in neuroscience and the brain memory system, along with families who have lost their child or were seriously injured due to child vehicular heatstroke. The timing of the bill’s introduction coincides with the kickoff of the National Vehicular Heatstroke Prevention Campaign by the National Highway Traffic Safety Administration (NHTSA).

No child should endure the tragedy of dying while trapped in a hot vehicle. The unfortunate reality is that even good, loving and attentive parents can get distracted. Studies have shown that this can happen to anyone, anywhere. That is why I am proud to have Representatives King and Schakowsky join me in introducing this important legislation. Our cars can already alert drivers when they leave their keys in the car, their lights on, or their trunk open – none of which are life threatening. It is not unusual for the government to mandate safety features to protect lives. Cars are mandated to have seat belts, interior trunk-releases, and rear backup cameras. Our legislation would move us one step closer to getting this inexpensive technology in every car on the road to help save the lives of children nationwide,” said Congressman Tim Ryan (D-13th OH).

The HOT CARS Act would require the U.S. Department of Transportation to issue a final rule requiring cars to be equipped with a system to alert the drive if a passenger remains in the back seat when a car is turned off.

“Since 1990, nearly 800 children have died from heatstroke in vehicles,” said Rep. Schakowsky (D-9th IL). “My colleagues Rep. Tim Ryan, Rep. Peter King and I are introducing the HOT CARS Act today in hopes of bringing that number down to zero. Even the most attentive parent can get distracted and forget a child in the back seat of their car. To prevent these tragedies, our bill would require all new vehicles to be equipped with an alert system to remind the driver to check the back seat. A simple alert can save lives.”

“The belief is that it can’t happen to you, always someone else. Unfortunately it happens over and over again, even to the most conscientious parents. Technology is available and it can be placed in new vehicles to protect innocent children. It’s really that simple. I am proud to work with Reps. Ryan and Schakowsky on this legislation,” said Rep. King (R-2nd NY).

Advocates for Highway and Auto Safety president Jackie Gillan stated, “Already this year nine children have died in hot cars, and the scorching summer days of high temperatures are still ahead of us. Yet, I want to be very clear that this is not just a ‘seasonal’ problem. These deaths are happening year round. The HOT CARS Act takes the same approach as the law enacted by Congress in 2008 that requires rear view cameras as standard equipment in all cars by May of 2018. This is a very reasonable and effective way to stop preventable, unnecessary injuries and deaths.”

“We commend Congressman Tim Ryan, Ranking Member Jan Schakowsky, and Congressman Pete King for their leadership on this very important safety issue. GM is committed to protecting the safety of children in and around our vehicles and has already deployed an industry-first Rear Seat Reminder on many of our 2017 and 2018 models. The Rear Seat Reminder is a simple feature that is intended to do exactly what it says: remind the driver to look in the rear seat before exiting the vehicle, said Dan Turton, vice president of GM North America Public Policy.

Miles Harrison, whose 21-month old son Chase died after being unknowingly left in a car, said, “Every time we hear of another child dying, we re-live that horrible day with them all over again and we ask WHY? Why does this keep happening when there is technology available to prevent it?” He continued, “We need to make sure that Congress mandates a vehicle alarm system to save the lives of our children and eliminate the crushing pain this causes their parents.”

Since 1990, more than 800 children have died in hot cars. Janette Fennell, president and founder of KidsAndCars.org, said, “Children will continue to die in hot cars unless something is done to help our exhausted and overtaxed brains. Education alone will not solve this problem. These unthinkable tragedies can only be prevented with the combination of education and technology. We certainly wish that we could train our memories to ‘never forget,’ but this is a very human condition we all live with.”

Deona Bien’s heartbreaking words spoke directly to many as she said, “No one could ever understand what the parents who have lost children due to heatstroke in a vehicle live through every single day. We now unite as grieving parents to ask for a long overdue alert system in cars so that they can prevent these tragedies from happening to more families. We all long for the day that no other children join ours in heaven.”

In the majority of cases, it is loving and caring parents who unknowingly leave their child in the car. Common stressors like a change in routine or lack of sleep or even simple distractions can all have an effect on even the most responsible parents. Dr. David Diamond, a professor in the Departments of Psychology, Molecular Pharmacology and Physiology at the University of South Florida, said, “The one aspect which is not a factor is that these children were not forgotten by parents who were reckless with regard to care for their children. This modern day phenomenon must be explained from a brain science perspective, not one that blames parents for be-
ing negligent.” He continued, “We must have a system that provides a reminder to parents of the presence of a child in the backseat for that rare occasion when a child’s life is in danger because parents, through no fault of their own, lose awareness of the presence of their child in the car.”

Norman Collins, grandfather to “Bishop” Collins who died in a hot car in 2011, said, “I call upon our lawmaking government officials to assist in the effort by supporting and passing the HOT CARS Act to save lives and avoid any more families having to endure the lifelong horror of grief that ours and so many other families have encountered due to the preventable tragedies of hot car deaths. Please help us to turn our pain into power, our tragedy into triumph, and our agony into positive action.”

A video recording of the press conference and additional materials can be found at saferoads.org.

National Highway Traffic Safety Administration (NHTSA)

Vehicle Heatstroke Prevention Campaign started June 5

Vehicle Heatstroke Prevention

Heatstroke is the leading cause of vehicular non-crash-related deaths for children under 14. In fact, each year, an average of 37 children have died from vehicle heatstroke between 1998-2015.

While it seems like an impossible mistake to make, every parent or caregiver can potentially become distracted, and distractions often fuel this devastating situation. No one is immune. Yet, this tragedy is 100% preventable.

We each have a role to play to help keep our kids safe. Help us share live-saving tips and resources with as many people as we can.

FAA Will Release Maps to Speed up Drone Authorization Applications

The Federal Aviation Administration (FAA) released the first set of unmanned aircraft systems (UAS) facility maps on April 27. The maps will depict areas and altitudes near airports where UAS may operate safely. They will help drone operators improve the quality of their Part 107 airspace authorization requests, which will help the FAA process these requests more quickly.

Beginning April 27, users may access the facility maps at http://www.faa.gov/uas. Users will be able to download the data in several formats, view the site on mobile devices, and customize their views.

By referring to the facility maps when completing airspace authorization applications, remote pilots will be able to tailor their requests to align with locations and altitudes that the maps indicate are likely to be approved for small UAS operations. This will help simplify the process and increase the likelihood that the FAA will approve their requests.

FAA air traffic personnel will use the maps to process Part 107 airspace authorization requests. Altitudes that exceed what are depicted on the maps require additional safety analysis and coordination to determine if an application can be approved.

The maps will be informational only. They do not automatically authorize flights. Remote pilots must still submit online airspace authorization applications at: https://www.faa.gov/uas/

The maps also do not guarantee approval for requests within the guidelines indicated by the maps. Only the FAA can grant controlled airspace access, which must be done through the authorization process.

The agency is releasing the maps in phases, with the first release on April 27 containing approximately 200 facility maps. The FAA plans to release facility maps over the next 12 months. Updates to the maps database will coincide with the agency’s existing 56-day aeronautical chart production schedule: https://www.faa.gov/air_traffic/flight_info/aeronav/productcatalog/does/media/Product_Schedule.pdf.

If a map is not yet available, it can be expected in future releases.

The FAA’s website will be updated within the several weeks with additional guidance and information about the facility maps. Visit www.faa.gov/uas to view the facility maps.

Additional questions may be directed to the FAA’s UAS Integration Office via uashelp@faa.gov or by calling 844-FLY-MY-UA.
This information is provided expressly for educational purposes. The Western TTAP hopes to inform and educate tribal communities about legislation that may impact California and Nevada tribal communities and their tribal transportation programs. The following legislation was current at the time of publication. Legislation may change or be repealed. For further information, please check the status of the legislation at the respective website sources noted below.

Due to the overwhelming number of pending transportation related bills in the California, Nevada, and Federal Legislatures we have created a downloadable file on the NIJC Website that lists each bill, the sponsor, the status, and a brief summary. To view and download the file go to: http://www.nijc.org/ttp_legislation.html

ANNOUNCEMENT
California Transportation Commission Approves Early Implementation Plan for Senate Bill 1

As a result of the passage of SB1, approximately $100 million new dollars will be added to Caltrans Active Transportation Program (ATP) annually over the next decade.

The California Transportation Commission held a Senate Bill 1 (SB1) implementation kickoff meeting in Sacramento on June 8 and 9, 2017, for interested stakeholders to learn about the SB1 programs under the purview of the Commission and the Commission’s development of guidelines to implement these programs.

Agenda, presentation materials, and a recording of the June 8th Kickoff Forum and Implementation Workshops are available here: http://catc.ca.gov/programs/SB1.html

On June 9th, the SB1 Implementation Workshop included a presentation of the draft guidelines for the 2017 ATP Augmentation. The presentation is available here: http://catc.ca.gov/programs/SB_1/6-9-17_ATP_Augmentation.pdf.

The presentation contains important and specific information about 2017 ATP Augmentation project eligibility, schedules, and application submittal process, and delivery expectations.

An additional workshop was held on June 23, 2017 for public comment on the draft 2017 Active Transportation Program Guidelines. These guidelines are on the agenda for approval for the next CTC meeting in Sacramento on June 28, 2017, and a call for 2017 ATP Augmentation projects is expected to be announced on June 30, 2017. Please carefully read the guidelines to be aware of specific project eligibility for this round of ATP funding.

An integral part of the California Transportation Commission's implementation strategy for the Road Repair and Accountability Act of 2017, Senate Bill (SB) 1 is to solicit input and feedback from transportation stakeholders and the public at large regarding the process of building guidelines for the new and existing programs under SB 1.

If you are interested in participating on one or more of the workgroups or interested in receiving further information regarding the programs, please take a moment to complete this form: http://catc.ca.gov/programs/SB_1/Workgroup_sign-up_form.pdf

TRIBAL TRANSPORTATION PARTNERS DIRECTORY

FEDERAL

Federal Highway Administration
United States Department of Transportation
1200 New Jersey Ave, SE
Washington, DC 20590
http://www.fhwa.dot.gov/index.html

Federal Highway Administration (FHWA) is charged with the broad responsibility of ensuring that America’s roads and highways continue to be the safest and most technologically up-to-date. Although State, local, and tribal governments own most of the Nation’s highways, FHWA provides financial and technical support to them for constructing, improving, and preserving America’s highway system.

Office of Federal Lands Highway
Federal Highway Administration
1200 New Jersey Avenue, SE
Washington, DC 20590
(202) 366-9494
http://flh.fhwa.dot.gov/

The Office of Federal Lands Highway (FLH) provides program stewardship and transportation engineering services for planning, design, construction, and rehabilitation of the highways and bridges that provide access to and through federally owned lands.

The primary purpose of the FLHP is to provide financial resources and technical assistance for a coordinated program of public roads that service the transportation needs of Federal and Indian lands.

Central Federal Lands Highway Division
Federal Highway Administration
12300 West Dakota Ave.
Lakewood, CO 80228
(720) 963-3500
E-mail: cfl.fhwa@dot.gov

The Central Federal Lands Highway Division (CFLHD) operates as part of the Federal Lands Highway Program, serving the needs of all central states. CFLHD actively administers the surveying, designing and constructing of forest highway system roads, parkways and park roads, Indian reservation roads, defense access roads, and other Federal lands roads. CFLHD also provides training, technology, deployment, engineering services, and products to other customers.

Interactive Highway Safety Design Model – 2016 Release
Includes a Beta version of crash prediction capabilities for freeway ramps/interchanges (including ramps, C-D roads and ramp terminals based on draft HSM Par C material developed under NCHRP Project 1-45. Available for free downloading at: https://www.fhwa.dot.gov/research/thrc/projects/safety/comprehensive/ihsdm/

Work Zone Law Enforcement
Safe and Effective Use of Law Enforcement in Work Zones
For more information go to http://safety.fhwa.dot.gov/wz/law_enforce/

FHWA Office of Safety

Local and Rural Road Safety Program
The FHWA Local and Rural Safety Program provides national leadership in identifying, developing, and delivering safety programs and products to local and officials and governments to improve highway safety on local and rural roads.
To visit the site go to: http://safety.fhwa.dot.gov/local_rural/

Roundabouts
Roundabouts are circular intersections. Roundabouts reduce traffic conflicts (for example, left turns) that are frequent causes of crashes at traditional intersections. Unlike a traffic circle or a rotary, a roundabout's incoming traffic yields to the circulating traffic. For more information visit the website at: http://safety.fhwa.dot.gov/intersection/roundabouts/

Roundabout Outreach and Education Toolbox
This Toolbox is designed to be a highly useable, online reference that connects transportation professionals with outreach resources from across the country to help them obtain public support for roundabouts.
To utilize the tool box go to: http://safety.fhwa.dot.gov/intersection/roundabouts/toolbox/

Roadway Worker Safety Website
The U.S. Federal Highway Administration’s Office of Operations has launched a new page on its Work Zone Safety website designed to be a central source of data and links to information and technical resources on roadway worker safety.
To visit the website go to: http://www.ops.fhwa.dot.gov/wz/workersafety/index.htm

Training, Tools, Guidance and Countermeasures for Locals
Local and Rural team is continuously looking for new ways to meet the needs of local and rural road owners and operators. Insuring that tools meet the needs of the users and that they have the resources and training they need to effectively use the tools is a critical part of the solution.
To visit the web site go to: http://safety.fhwa.dot.gov/local_rural/training/
TRIBAL TRANSPORTATION RESOURCES

- **Local & Rural Road (LRR) Safety Peer-to-Peer (P2P) Program**
  Open to public highway agencies seeking to adequately address safety problems on their local and rural road network.
  To visit the website go to: http://safety.fhwa.dot.gov/local_rural/training/p2p/

- **Proven Safety Countermeasures**
  New website from the Office of Safety
  To visit the website go to: http://safety.fhwa.dot.gov/provencountermeasures/

- **Resources: Crash Modification Factors in Practice**
  To visit the website go to: http://safety.fhwa.dot.gov/tools/crf/resources/cmfs/index.cfm

- **Roadway Safety Noteworthy Practices Database**
  To visit the website go to: http://rspcb.safety.fhwa.dot.gov/noteworthy/

- **Horizontal Curve Safety**
  A focus on horizontal curves can prove to be a cost effective approach to reducing roadway departure crashes.
  To visit the website go to: http://safety.fhwa.dot.gov/roadway_dept/horicurves/

- **Road Diets: A Proven Safety Countermeasure (Long version) 2016**
  A Road Diet is a roadway reconfiguration that increases safety and livability at a low cost. Implementing Road Diets improves mobility and accessibility for all users, including pedestrians and bicyclists.
  To view the video go to: https://www.youtube.com/watch?v=n3ucpaCigig

- **Unsignalized Intersection Safety Strategies**

- **Pedestrian Safety Guide and Countermeasure Selection System (Pedsafe)**
  An online toolbox that communities can use to improve pedestrian safety in their area.
  To visit the website go to: http://www.pedbikesafe.org/PEDSAFE/index.cfm

- **The National Work Zone Safety Information Clearinghouse**
  The Clearinghouse is dedicated to providing the transportation construction industry and the general public with comprehensive information to improve motorist, worker and pedestrian safety in roadway work zones. Now a new international section in six languages.
  For more information go to: http://www.workzonesafety.org/

- **Work Zone Safety and Flagger Tutorial**
  The purpose of this tutorial is to provide the fundamentals of work zone safety and to explain the concepts of flagging in a work zone. It is not intended to replace comprehensive instruction of the topic.
  To view the tutorial go to: https://www.workzonesafety.org/training/work-zone-safety-and-flagging-tutorial/

- **3M Roadway Safety**

- **Federal Transit Administration**
  Transit Bus Safety Online resources and tools, designed to help rural and small urban transit bus providers develop and strengthen their programs.
  To access the website go to: https://www.transit.dot.gov/regulations-and-guidance/safety/fta-sponsored-training-courses

- **Utah DOT and the Utah Highway Safety Office**
  Zero Fatalities
  To visit the website go to: http://ut.zerofatalities.com/

- **Crash Modifications Clearinghouse (CFM)**
  The CMF Clearinghouse is funded by the U.S. DOT-FHWA and maintained by the University of North Carolina Highway Safety Research Center. A CMF is an estimate of the change in crashes expected after implementation of a countermeasure.
  To visit the website go to: http://www.cmfclearinghouse.org/

- **Impact Teen Driver**
  Impact Teen Drivers was organized for the purpose of providing awareness and education to teenagers, their parents, and community members about all facets of responsible driving, with the goal of reducing the number of injuries and deaths suffered by teen drivers as a result of distracted driving and poor decision making.
  To view the website go to: http://www.impactteendrivers.org/

WEBSITE APPLICATIONS—APPS

Heat Safety Tool App
U.S. Department of Labor (DOL), Occupational Safety and Health Administration (OSHA)
The App allows workers and supervisors to calculate the heat index for their worksite.
To download the app go to:
https://www.osha.gov/SLTC/heatillness/heat_index/heat_app.html

Transportation Construction Advocate App
American Road & Transportation Builders Association (ARTBA)
Available for both Android and Apple devices.
To download the app go to:
http://www.artba.org/transcon-app/

Asphalt Calculator+ App
This iPhone/iPod Touch app will calculate the amount of cubic yards needed for a given job. It will also calculate hot mix tonnage. Polyclief Software.
To download the app go to:

Life Saver Apps
Distracted driving for parents and students. Android and IPhone.
To visit the website go to:
http://lifesaver-app.com/

TC3 Free Mobile App
TC3 is an AASHTO technical service program focused on the web-based training of front-line workers in the areas of construction, maintenance, and materials.
Download the app today at:

B4UFLY App
Federal Aviation Administration
Helps unmanned aircraft operators determine whether there are any restrictions or requirements in effect at the location where they want to fly.
For more information go to:
http://www.faa.gov/uas/b4ufly/

# Hands Off App
A project developed by the Milt Olin Foundation to raise awareness about the dangers of distracted driving. Users commit to safe driving by downloading #HandsOff and taking the #HandsOff pledge, then sharing their video pledge with friends. Download the app from iTunes or Google Play.
For more information go to:
http://miltolinfoundation.org/

Pocket Guide to Transportation App
The 50th anniversary of the U.S. Department of Transportation, Bureau of Transportation Statistics (BTS) is introducing its most innovative product yet—a smartphone app for the Pocket Guide to Transportation.
For more information go to:
https://www.transportation.gov/fastlane/introducing-pocket-guide-transportation-app

SaferRide App
NHTSA’s mobile app, SaferRide, is the simplest possible way to get home safe and only has three self-explanatory buttons on the home screen. Features: Choose from a list of available taxi services in your area, and with the tap of a button call them. Call a pre-programmed contact. If you just need to know where you are, you can bring up a map of your current location.
To Download the app go to:

TRANSPORTATION PROGRAMS AND DEVELOPMENT

FHWA Resource Center
The Mission to advance transportation technologies and solutions through training, technical assistance, technology deployment, and partnerships.
For more information go to:
http://www.fhwa.dot.gov/resourcecenter/

The FHWA has developed an extensive list of resources that
focus specifically on the latest culvert technology. To view this list go to: http://www.scribd.com/doc/63745094/Culvert-Technologies-List

Pavement Construction and Safety Training on Demand
New free Web-based courses sponsored by the Federal Highway Administration (FHWA)
To view the courses go to: http://www.fhwa.dot.gov/publications/focus/13jul/13jul02.cfm

Transportation Safety Institute
Welcome to the USDOT’s Transportation Safety Institute Learning Management System. Our continuing mission is to develop and provide world-class safety, security, and environmental training, products, and/or services for both public and private sectors.
To visit the website go to: https://www.transportation.gov/transportation-safety-institute

National Transit Institute (NTI)
Rutgers, The State University of New Jersey, The mission of the National Transit Institute is to provide training, education, and clearinghouse services in support of public transportation and quality of life in the United States.
To visit the website go to: http://www.ntionline.com/

National Highway Institute (NHI)
As the training and education arm of the Federal Highway Administration (FHWA), the National Highway Institute (NHI) has a long and rich history of innovation and expertise in delivering transportation training. Improving the conditions and safety of our nation's roads, highways, and bridges means continuously building on the skills of highway professionals and enhancing job performance in the transportation industry across the country. To see the list of free web-based courses go to: https://www.nhi.fhwa.dot.gov/training/course_search.aspx?tab=0&sfl=1

Federal Emergency Management Agency (FEMA)
Emergency Management Institute Tribal Curriculum
To collaborate with tribal governments to build emergency management capability and partnerships to ensure continued survival of Tribal nations and communities.
To view the course go to: https://training.fema.gov/tribal/

National Cooperative Highway Research Program (NCHRP)
Report 667
Model Curriculum for Highway Safety Core Competencies presents course materials, including the instructor’s guide and student workbook, for a fundamental highway safety training course. The course is designed to address the core competencies highway safety practitioners should have or acquire. An accompanying CD-ROM includes a brochure and short Microsoft PowerPoint presentation for marketing the training course.
To view the report go to: https://www.nap.edu/catalog/14459/model-curriculum-for-highway-safety-core-competencies

Paul S. Sarbanes Transit in Parks Technical Assistance Center (TRIPTAC)
The TRIPTAC is available to all Federal Land Management Agencies (FLMAs), not only those applying for or receiving funds from the Transit in Parks program. State, local or tribal governments who are working in collaboration with an FLMA to expand public lands access are also welcome to use TRIPTAC services to obtain alternative transportation information and assistance.
To view available training courses go to: http://www.triptac.org/TRIPTACServices/Training/Default.html

University of California, Berkeley, Institute of Transportation Studies
Technology Transfer Program
To visit the website go to: http://www.techtransfer.berkeley.edu/

University of California, Berkeley, Safe Transportation Research and Education Center (SafeTREC)
Affiliated with the School of Public Health and the Institute of Transportation Studies, with additional partnerships with the City and Regional Planning, Public Policy, and Transportation Engineering.
To visit the website go to: https://safetrec.berkeley.edu/

U.S. Small Business Administration (SBA)
Online Courses for Starting Your Business
Several free online courses are offered by the SBA to help prospective and existing entrepreneurs understand the basics about writing a business plan.
For more information go to: http://www.sba.gov/content online-courses-starting-your-business

Community Transportation Association of America (CTAA)
Passenger Service and Safety PASS Basic Training Program
The PASS Basic program consists of 6 modules and includes comprehensive training on the assistance that drivers should be providing to passengers with special need.
For more information go to: http://training.ctaa.org/

Community Transportation Safety and Security Accreditation (CTSSA)
The program is designed to promote the safety and security of the customers of community and public transportation systems and also to promote the safety and security of the women and men who deliver these services and provide mobility for the

riding public every day.
For more information go to:

Minnesota Local Technical Assistance Program (LTAP)
Gravel Road Maintenance and Design (Online)
This course helps supervisory personnel and operators better understand the materials, techniques, and equipment needed for maintaining gravel roads.
To enroll in the course go to:
http://www.mnltap.umn.edu/training/topic/maintenance/gravelform.html

Curbing Transit Employee Distracted Driving
The 30-minute course, was developed by FTA in conjunction with the Florida Department of Transportation It’s an excellent tool to educate, inform, and increase awareness among all transit workers about the dangers and challenges associated with distracted driving.
For more information go to:

Work-Zone Safety Tutorial
Minnesota LTAP has launched a new online free tutorial that offers a convenient opportunity for new, seasonal, or temporary staff to learn about the fundamentals of work-zone safety and the basic concepts of the work-zone area before arriving at the job site. There is no cost to take the tutorial, and registration is not required.
To view the tutorial go to:
http://www.mnltap.umn.edu/training/online/workzone/

Cal EPA
Training: California Indian Tribal Relations
CalEPA’s step forward toward meeting our “commitment to educate appropriate staff, to become informed about the cultural setting of California Native Americans, their environmental issues and Tribal histories, for the purpose of improving CalEPA’s understanding of and connection to California Native American Tribes.”
To visit the website go to:
http://calepa.ca.gov/tribal/training/

Minnesota Local Road Research Board (LRRB)
YouTube video library with 34 videos to date.
For more than 50 years, the Local Road Research Board (LRRB) has brought important developments to transportation engineers throughout Minnesota. Those developments range from new ways to determine pavement strength to innovative methods for engaging the public. Today, the LRRB remains true to its important mission: supporting and sharing the latest transportation research applications with the state’s city and county engineers.

FHWA-Developing a Transportation Safety Plan
How to conduct transportation safety planning and develop Transportation Safety Plans. It is based on the Developing a Transportation Safety Plan module, which is one of 12 modules in the series Transportation Decision-making: Information Tools for Tribal Governments. The FHWA Office of Planning produced this series to educate tribal planners and decision makers about the tribal transportation planning process and to provide them with useful program information.
To visit the website go to:
https://www.fhwa.dot.gov/planning/processes/tribal/planning_modules/safety/

Newly Revised Emergency Procedures for Rural Transit Drivers Training Module
National RTAP
The Emergency Procedures module offers the most current training on preparedness for hazards and threats that transit operators may encounter. The free module contains a Learner’s Guide, a Self-paced eLearning Course Disc, an Instructor’s Guide, a disc with videos and a trainer’s PowerPoint presentation. Email info@nationalrtap.org or call 888-589-6821 to order. To visit the website go to:
http://www.nationalrtap.org/

Center for Transportation e-Learning’s Computer-Based Educational Program
To visit the website go to:

U.S. Department of Transportation—Everyday Counts Leadership Academy
The Every Place Counts: Leadership Academy was created as part of the Ladders of Opportunity Initiative at the US Department of Transportation. We hope the Leadership Academy will provide community members and other stakeholders who have never participated in a transportation decision-making process before and are not subject matter experts with the background information and some tools to engage in the transportation decision-making process.
To visit the website go to:
https://www.transportation.gov/leadershipacademy
The NIJC web site has the complete list of publications, newsletters, videos, CDs, and DVDs going back several years. To view the Tribal Transportation (TTAP) Resources data base go to: http://www.nijc.org/datasheets/vtap_resourceslist.php

Ordering Information
Printed copies of our in-house publications are available on a first-come, first served basis. Priority is given to Tribal Transportation Personnel. PDF versions of most of our publications are available on our website: http://www.nijc.org/ttp_resources.html

All our videos, publications and CD-ROMs in our lending library are loaned for a four-week period. Two titles may be borrowed at a time.

To order or borrow materials, please send a request to: barry@nijc.org or, tcoord@nijc.org or Fax a request to: 707-579-9019.

To view past issues of publications, videos and development programs, please visit our website library at: http://nijc.org/datasheets/ttp/TTAP_Resourceslist.asp

CALIFORNIA

CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS)

On September 26, 2013, Governor Brown signed legislation creating the Active Transportation Program (ATP) in the Department of Transportation (Senate Bill 99, Chapter 359 and Assembly Bill 101, Chapter 354). The ATP consolidates existing federal and state transportation programs, including the Transportation Alternatives Program (TAP), Bicycle Transportation Account (BTA), and State Safe Routes to School (SR2S), into a single program with a focus to make California a national leader in active transportation. The ATP administered by the Division of Local Assistance, Office of Active Transportation and Special Programs. The purpose of ATP is to encourage increased use of active modes of transportation by achieving the following goals:

- Increase the proportion of trips accomplished by biking and walking.
- Increase safety and mobility for non-motorized users,
- Advance the active transportation efforts of regional agencies to achieve greenhouse gas (GHG) reduction goals,
- Enhance public health,
- Ensure that disadvantaged communities fully share in the benefits of the program, and
- Provide a broad spectrum of projects to benefit many types of active transportation users.

Cycle 4 Call for Projects is scheduled for early 2018. And includes FY 21/22 and 22/23.
For more information go to: http://www.dot.ca.gov/hq/LocalPrograms/atp/index.html

California Department of Resources Recycling and Recovery (CalRecycle)
CalRecycle offers a variety of grant funding opportunities to assist public and private entities in safely and effectively managing California’s waste stream.

Application materials forthcoming:
- Beverage Container Recycling Grants.
- Farm and Ranch Cleanup Grants, (FY) 2017-18 will tentatively be available summer 2017.
- Local Enforcement Agency Grants.
- Illegal Disposal Site Abatement Grant Program. FY 2017-18 August 2, November 2, and February 6, 2018.
- Legacy Disposal Site Abatement Partial Grant Program. FY 2017-18 August 2, November 2, and February 6, 2018.
- Waste Tire Cleanup grants.
- Rubberized Pavement (TRP) Grant Program. (FY) 2017-18 will tentatively be available summer 2017.
- Tire-Derived Aggregate (TDA) Grant Program. (FY) 2017-18 will tentatively be available Summer 2017.
- Tire Derived Product (TDP) Grant Program.

Additional grant information and list of active grants can be found at: http://www.calrecycle.ca.gov/Funding/

Caltrans Transportation Planning Grant Program
Transportation Planning Grants ($25 million annually) to encourage local and regional planning that further state goals, including, but not limited to, the goals and best practices cited in the regional transportation plan guidelines adopted by the California Transportation Commission.
Climate Change Adaptation Planning Grants ($20 million over three years) to local and regional agencies for climate change adaptation planning.
The deadline for applications is October 20, 2017
For more information go to: http://www.dot.ca.gov/hq/tpp/grants.html
TRIBAL TRANSPORTATION FUNDING RESOURCES

FUNDING (continued)

Highway Safety Improvement Program (HSIP)
It is never too early for local agencies to analyze their roadway network to 1) identify their highest crash locations and corridors, 2) consider effective and efficient countermeasures to improve the safety of these locations/corridors, and 3) identify projects that have the highest Benefit-to-Cost ratios. Cycle 9 is expected to be announced May, 2018
http://www.dot.ca.gov/hq/LocalPrograms/hsip.html

NEVADA

Nevada Department of Transportation (NDOT)
Transportation Alternatives Program (TAP)
The Nevada TAP provides federal transportation funds for projects that improve non-motorized mobility, historic preservation, scenic accessibility, safe routes to school (SRTS) and environmental/vegetation management. The FY 2016-2018 cycle is now open.
For more information go to:
http://www.nevadadot.com/tap/
and
http://www.nevadadot.com/home/showdocument?id=3291

Nevada Transportation Enhancement Program
The Nevada Department of Transportation (NDOT) and the Federal Highway Administration (FHWA) share your interest in these projects and others that enhance the transportation experience in your area and make our communities more livable. The TE program was developed to fund projects that go beyond where typical transportation projects usually stop.
Applications due the second Monday each March
For more information go to:
http://www.nevadadot.com/Projects_and_Programs/Landscape_and_Aesthetics/Landscape_Aesthetics_Program.aspx

FEDERAL

U.S. DEPARTMENT OF TRANSPORTATION

Transportation Alternatives Program (TAP)
• Safe Routes to School Program.
• National Scenic Byways
The Moving Ahead for Progress in the 21st Century Act (MAP-21) authorized the Transportation Alternatives Program (TAP) to provide funding for programs and projects defined as transportation alternatives, including on- and off-road pedestrian and bicycle facilities, infrastructure projects for improving non-driver access to public transportation and enhanced mobility, community improvement activities, and environmental mitigation; recreational trail projects; safe routes to school projects; and projects for planning, designing, or constructing boulevards and other roadways largely in the right-of-way of former divided highways. The TAP replaced the funding from pre-MAP-21 programs including the Transportation Enhance-

ment Activities, Recreational Trails Program.
For more information go to:
http://www.fhwa.dot.gov/environment/transportation_alternatives/

IDEA Program
TRB’s Innovations Deserving Exploratory Analysis (IDEA) annual program announcement solicits funding proposals for the upcoming review cycles. The announcement explains the IDEA programs, describes the types of eligible projects and their funding structures, suggests general areas for which IDEA proposals can be submitted, and provides guidelines and forms for submitting proposals.
• The Transit IDEA program deadlines are May 1 and November 1, 2017
• NCHRP IDEA cycles deadlines March 1 and September each year.
• The Rail Safety IDEA program has one review cycle per year.
If the proposal submission due date for any IDEA program falls over a weekend or on a federal holiday, the due date automatically moves to the next business day. The IDEA programs provide start-up funding for promising, but unproven, innovations in surface transportation systems. The programs’ goals are to seek out and support new transportation solutions that are unlikely to be funded through traditional sources.
For more information go to:
http://www.trb.org/IDEAProgram/IDEAProgram.aspx

Accelerated Innovation Deployment Demonstration (AID)
The final notice announces the availability of funding and requests grant applications for FHWA’s Accelerated Innovation Deployment (AID) Demonstration authorized within the Technology and Innovation Deployment Program (TIDP) under the Moving Ahead for Progress in the 21st Century Act (MAP-21).
Consistent with other FHWA funding provided to tribes, federally recognized tribe identified on the list of “Indian Entities Recognized and Eligible to Receive Services from the Bureau of Indian Affairs” (published at 77 FR 47868) is eligible to apply for AID Demonstration.
All applications will be evaluated on a rolling basis until September 30, 2020. Applications will be assigned a rating of “Qualified” or “Not Qualified.”
For more information go to:
http://www.grants.gov/web/grants/view-opportunity.html?oppId=245654
To view writing proposals for AID projects webinar go to:
https://connectdot.connectsolutions.com/p7zvd0q6u2/?launcher=false&fcsContent=true&pbMode=normal

Infrastructure for Rebuilding America (INFRA)
The US Department of Transportation launched a new website announcing the Notice of Funding Opportunity (NOFO) for a total of $1.5 Billion, for the “Infrastructure for Rebuilding America” (INFRA) Grants Program. This is similar to...
the “FASTLANE” program. Tribal or Tribal Consortium governments may apply directly. Applications must be submitted by November 2, 2017. For information on how to apply, see page 2 of the NOFO.
For more information go to: https://www.transportation.gov/buildamerica/infragrants

Bureau of Indian Affairs (BIA)

BIA IHSP-Child Passenger Safety Seat Program Grant
Tribes can apply for the Child Passenger Safety Seat Program grant with this application. Deadlines to apply are: May 1, 2018 for the FY2019, May 1, 2019 for the FY2020.
To view the application go to: https://gallery.mailchimp.com/7622d84e-568d-4d09-be84-54556beb9f0d/CPSGrantApplicationwithInstructions.pdf

BIA IHSP-Law Enforcement Grant
Tribes can apply for the full-time and over-time Law Enforcement grant with this application; use the drop down menu to select the grant the tribe is applying for. Deadlines to apply are: May 1, 2018 for the FY2019, May 1, 2019 for the FY2020.
To view the application go to: https://gallery.mailchimp.com/7622d84e-568d-4d09-be84-54556beb9f0d/LawEnforcementGrantApplicationwithInstructions.pdf

Energy and Mineral Development Grants
This program provides financial assistance to federally recognized tribes and Indian allottees on trust lands to evaluate their energy (conventional and renewable), and mineral resource potential on their lands. Deadline to apply is September 25, 2017
For more information go to: https://www.bia.gov/WhoWeAre/AS-IA/IEED/DEMD/TF/index.htm

Grant Program to Build Tribal Energy Development Capacity (TEDC)
The Division of Energy and Mineral Development (DEMD) annually provides tribes an opportunity to participate in the Tribal Energy Development Capacity (TEDC) grant program. The purpose of the TEDC grant program is to develop tribal managerial, organizational and technical capacity needed to maximize the economic impact of energy resource development on Indian land. Deadline to apply is October 9, 2017.
For more information go to: https://www.grants.gov/web/grants/view-opportunity.html?oppId=295312

DOE-Fish and Wildlife Service
Tribal Wildlife Grants Program
The Tribal Wildlife Grants (TWG) Program is part of a program providing wildlife conservation grants (known as the State Wildlife Grants Program) to States and to the District of Columbia, U.S. Territories, and Tribes under provisions of the Fish and Wildlife Act of 1956 and the Fish and Wildlife Coordination Act, for the development and implementation of programs for the benefit of wildlife and their habitat and species of Tribal cultural or traditional importance, including species that are not hunted or fished. Deadline to apply is September 1, 2017.
For more information go to: https://www.grants.gov/web/grants/view-opportunity.html?oppId=293813

U.S. Department of Agriculture (USDA)

Rural Community Development Initiative (RCDI)-Utilities
These grants will be made to qualified intermediary organizations that will provide financial and technical assistance to recipients to develop their capacity and ability to undertake projects related to housing, community facilities, or community and economic development that will support the community. The deadline to apply is July 25, 2017.
For more information go to: https://www.grants.gov/web/grants/view-opportunity.html?oppId=294134

Water & Waste Disposal Loan & Grant Program
Provides funding for clean and reliable drinking water systems, sanitary sewage disposal, sanitary solid waste disposal, and storm water drainage to households and businesses in eligible rural areas. Tribal lands in rural areas. Applications for this program are accepted through your local offices year round.
For more information go to: https://www.rd.usda.gov/programs-services/water-waste-disposal-loan-grant-program

Emergency Community Water Assistance Grants
This program helps eligible communities prepare for, or recover from, an emergency that threatens the availability of safe, reliable drinking water for households and businesses. Tribal lands in rural areas. Applications for this program are accepted through your local offices year round.
For more information go to: https://www.rd.usda.gov/programs-services/emergency-community-water-assistance-grants

Environmental Protection Agency (EPA)

Technical Assistance for Tribes to Address Brownfields
EPA has selected Kansas State University to provide technical assistance to tribal communities addressing Brownfields issues. This new grant will run through 2021 and provide support to tribes across the country on Brownfields issues. For more information visit the Kansas State university Technical Assistance to Brownfields website at: https://www.wsutab.org
NIJC SERVICES

The National Indian Justice Center (NIJC) provides a range of services, including regional and local training sessions under contracts with tribes, court evaluation and court planning services, and other resource services.
