In 2013, about 40 vehicles crashed on I-70 near Indianapolis, Indiana, when snow squalls kicked up one January afternoon, making the pavement slick and visibility poor. Cars and trucks blocked the interstate in both directions when emergency responders arrived.

The crews trained in traffic incident management techniques, worked efficiently to clear the scene. The cooperated on a decision to move vehicles to a staging area off the interstate for further investigation. One towing company as incident commander for all towing agencies. The interstate was opened to traffic within seven hours.

The incident might have caused another six hours of road closure time if responders had not used techniques they learned in the second Strategic Highway Research Program’s National Traffic Incident Management Responder Training course. The Federal Highway Administration deployed the training during the second round of Every Day Counts.

“States benefit from training focus
Among the states that have made training in traffic incident management techniques a priority is Ohio, where the transportation department and state highway patrol have trained more than 11,000 responders. Ohio’s training push has touched the entire responder community, from law enforcement and fire to towing and public works. In one case, a crash in Mansfield requiring a medical helicopter closed I-71 for only 20 minutes because crews had learned quick response techniques.

First responders in other states also have traffic incident management success stories to tell. In Oregon, for example, where more than 2,000 responders have undergone training, interagency communication and coordination enabled responders to restore traffic less than 90 minutes after a dump truck spilled a load of gravel across both northbound lanes of I-5. When the gravel spewed across the interstate, three secondary crashes occurred almost immediately.

Oregon State Police relayed information to the Oregon Department of Transportation on the equipment needed to remove the debris. An Oregon DOT incident response vehicle quickly established a lane closure and set

The National Indian Justice Center is located in Santa Rosa, California. NIJC’s building also houses the administrative offices of the California Indian Museum and Cultural Center, the Intertribal Court of California and the Regional Tribal Justice Center. Construction is currently underway for the California Indian Museum and Cultural Center, which will include a storytelling venue, Native plants garden, California Indian foods, a small Native village, audio-visual displays that highlight California Indian history and the contributions of California Indians, as well as Edward Curtis prints and traveling exhibits. If you are in the area, please come visit and tour the facilities.

Tribal Transportation Safety Assessments For California Native American Communities

Description
Based on the successful, award-winning, ongoing services funded by the California Office of Traffic Safety (OTS) for Safety Assessments for California Communities, this Caltrans funded program works similarly to help California Native American communities identify and implement transportation safety solutions that will lead to improved safety for all – motorists, passengers, bicyclists, and pedestrians.

This program will provide California Native American communities with highly focused, in-depth, expert safety reviews of problem areas and specific recommendations for safety improvements within their jurisdictions, as well as on the roadways accessing their land.

The technical assistance services offered by Tech Transfer and funded by Caltrans are intended to provide California Tribal governments with a reliable, respected, independent, and credible source of information that fosters collaboration between the Tribes and local engineering, public works, planning or community development, and police/sheriff departments of neighboring agencies. They also help Tribal governments identify potential sources of funding to make the improvements, and establish the justification to use in future grant applications.

Partners
- California Department of Transportation (Caltrans), Division of Transportation Planning, Office of Sustainable Community Planning, Native American Liaison Branch (NALB)
- UC Berkeley, Institute of Transportation Studies, Technology Transfer Program (Tech Transfer)
- National Indian Justice Center (NJC), Western Tribal Technical Assistance Program
- California Department of Public Health (CDPH), Pedestrian Safety (PEDSAFE) Program
- UC Berkeley, Institute of Transportation Studies, Safe Transportation Research and Education Center (SafeTREC)

National Center for Rural Road Safety

Launched its website this week, which offers a variety of resources for transportation professionals working to make travel safer on our nation’s rural roads, [http://ruralsafetycenter.org](http://ruralsafetycenter.org). Also, announcing inaugural training on Tuesday, November 3rd from 9:00 - 10:30 AM MST for a FREE, 1.5 hour online training entitled "Introduction to the National Center for Rural Road Safety - What does the Safety Center offer to road agencies and their personnel?"

California Department of Transportation

Caltrans has developed the California Statewide Federal Surface Transportation Reauthorization Consensus Principles document including a section on Tribal Transportation which was submitted to the California U.S. Congressional Delegation in September.

Federal Highway Administration

National Network for the Transportation Workforce

The success of the United States to deliver and manage an efficient, safe, and effective transportation system is directly dependent on the knowledge, skills and abilities of the transportation workforce. To provide for a more strategic and effective approach to transportation workforce development, the Federal Highway Administration has established the National Network for the Transportation Workforce (NNTW) to consist of five Regional Surface Transportation Workforce Centers.

Mission

The Centers will serve as a resource to support, grow and maintain a skilled and career-ready transportation workforce in their respective regions. The Centers are network, rather than program focused and will engage in existing regionally based programs, to catalyze new strategic partnerships and communicate programs and best practices to educators, employers and those on the transportation career pathway.

Role of Stakeholders

The NNTW is actively soliciting the engagement of transportation workforce stakeholders at the national, regional and local levels to participate as strategic partners in these important efforts. Stakeholders can offer:

- On the ground assessments of labor supply and demand and workforce skill gaps;
- Assisting in crafting a unified message on career awareness; and
- Promotion of NNTW clearinghouse resources to their constituents.

trained, clearance times for noninjury crashes improved by 52 percent after responders applied lessons learned through the traffic incident management program. In one case, the opportunity came quickly for trainees who had just finished the course. The two—members of the Arizona Department of Transportation Enforcement and Compliance Division—were traveling on I-15 near Mesquite, Nevada, when they witnessed a crash involving a car and tractor-trailer.

Using what they had learned, they created a safety zone around the two vehicles to keep a lane open down the middle of the highway. Minutes later, the Nevada Highway Patrol arrived and shut down the highway to southbound traffic. When emergency medical responders arrived, they parked just in front of the injured parties, a best practice from the course the Arizona.

Arizona DOT staff used traffic incident management techniques when they encountered a crash on their way back from a training class.

(Continued from page 1)

up advance warning for motorists. A maintenance crew arrived with a grader, broom trucks and blowers to move the debris to the shoulder. Without enhanced collaboration, the incident could have taken two to three hours to clear.

A key training goal is responder safety, which paid off in Massachusetts, where more than 1,300 responders have been trained. After Captain Jason Cavallaro of the Hanover Fire Department attended a train-the-trainer session, he added traffic incident management to the department’s training program. “While working at the scene of a motor vehicle collision on Route 3, our engine was struck by a vehicle that had lost control due to slick road conditions,” Cavallaro said. “Because of the placement of the engine in accordance with traffic incident management concepts, the engine took the hit and the vehicles and personnel operating at the original collision were protected.”

The crash put the fire truck out of service, but a firefighter on board and the two occupants of the vehicle that struck the engine experienced only minor injuries. “The firefighters credited the traffic incident management training for the outcome of the incident,” Cavallaro said.

In Arizona, where close to 3,700 responders have been trained, clearance times for noninjury crashes improved by 52 percent after responders applied lessons learned through the traffic incident management program. In one case, the opportunity came quickly for trainees who had just finished the course. The two—members of the Arizona Department of Transportation Enforcement and Compliance Division—were traveling on I-15 near Mesquite, Nevada, when they witnessed a crash involving a car and tractor-trailer.

Using what they had learned, they created a safety zone around the two vehicles to keep a lane open down the middle of the highway. Minutes later, the Nevada Highway Patrol arrived and shut down the highway to southbound traffic. When emergency medical responders arrived, they parked just in front of the injured parties, a best practice from the course the Arizona.

Current research shows the rate of death and significant injury from motor vehicle crashes is much higher for American Indians than for other populations in the United States. Tribal transportation leaders and federal agencies agree that this is an area of elevated concern and priority. Unfortunately, there is very little research to guide strategic policies and investments to improve safety. The Roadway Safety Institute, a regional University Transportation Center housed at the University of Minnesota, is collaborating with tribal governments on three projects to better address these challenges.

Collaborating with American Indian Communities to Re-Interpret and Strategize about Transportation Safety Risks in Tribal Lands

This study aims to get a better picture of the nature of transportation safety concerns in tribal governance areas, analyze the sources of safety risks and problems, identify successful programs and policies, and generate recommendations about policies and investments. Tribal government leaders, transportation coordinators, and other key community members can offer extremely valuable insights in this analysis. Therefore, this study centers around qualitative data collection and a problem-solving approach in collaboration with tribal governments. Our goal is to provide a more nuanced, informative, and fair picture of the problem and strategies to improve safety.

GIS Data Acquisition and Spatial Analysis of Factors Affecting Traffic Crashes on Tribal Lands

This study is investigating the potential for new advances in Geographic Information Systems (GIS) to enhance the collection, availability, and use of information related to transportation safety. Conducted in partnership with Esri, the study includes a preliminary assessment of geo-related traffic safety information. Through collaborative analysis with tribal communities, the study will also develop prototypes for potential use that will be evaluated through a series of stakeholder assessments.

Education Activities for Tribal Youth

Several Institute initiatives are bringing our research projects and resources to underrepresented K-12 students—including those in tribal communities—to promote safety, education, and STEM careers.

The University of Minnesota Extension has a longstanding partnership with the White Earth Nation to operate a summer Academy of Math and Science for reservation youth in grades 4–8. The Institute is currently in discussion with the camp organizers to develop a safety curriculum for the next camp session in June 2015. Students will explore transportation safety and its connection to their tribe’s history and culture. The Institute is also exploring opportunities to connect female American Indian youth to mentors through a partnership with WTS and its Transportation YOU program. Though the initial efforts are based in Minnesota, we plan to expand to the rest of Region 5 in our second year.

In addition, the Institute is developing new curriculum packages that can be easily shared with tribal and other communities through Transportation YOU programs, summer camps, STEM festivals, and other events that reach students of diverse backgrounds.

About the Institute

The Roadway Safety Institute is the Region 5 University Transportation Center, led by the University of Minnesota. Other members are the University of Akron, the University of Illinois at Urbana-Champaign, Southern Illinois University Edwardsville, and Western Michigan University. Driven by the goal of preventing crashes to reduce fatalities and life-changing injuries, the Institute’s activities focus on human-centered solutions to advance roadway safety.

Exploring Transportation on Tribal Lands

The fatality rate for motor vehicle crashes is higher for American Indians than for any other ethnic or racial group in the United States. The challenges of roadway safety on tribal lands were discussed during the Roadway Safety Showcase: Safety Innovations for Today and Tomorrow. The event, held in St. Paul in May, highlighted the latest work of Roadway Safety Institute (RSI) researchers.

In opening remarks, USDOT Assistant Secretary for Transportation Greg Winfree noted the importance of the tribal transportation issue not only from a safety perspective, “but from [its] ability to uplift all Americans and guarantee...ladders of opportunity,” he said.

Winfree introduced assistant professor Kathryn Quick and research associate Guillermo Narváez, researchers at the U of M’s Humphrey School of Public Affairs who are exploring this issue. In an RSI-sponsored project, Quick and Narváez are collaborating with American Indian communities to better understand the transportation safety risks on tribal lands and develop strategies to mitigate these risks.

Quick and Narváez are focusing on gathering on-the-ground knowledge about the nature of roadway risks and options to improve safety in reservations in Minnesota. Preliminary findings suggest that tribal transportation safety problems may not be so different from rural safety problems, except for a much greater concern for pedestrian safety.

Many reservation residents, by choice or necessity, travel on foot in the roadway as a way to get around, and several tribal governments are actively promoting walking, jogging, and biking for their recreational and health benefits. However, people feel unsafe because of narrow road shoulders, poor lighting, vegetation, or wildlife. In addition, there are many concerns that drivers who are not from the reservation do not expect or anticipate pedestrians in some locations, as well as concerns about congestion and speeding by non-locals, especially during peak tourism periods.

Tribal transportation leaders have not mentioned alcohol-impaired driving as a top challenge, Quick said, which is a bit surprising given popular perceptions and some previous studies. “We will be continuing to probe that as we develop relationships and trust with them.”

The team has also heard themes around enforcement and how it’s key not just for supporting safety but also for reporting and monitoring safety issues.

“There are some collaborative issues around data quality, data sharing and barriers to interpreting that data. There are also many jurisdictional and coordination issues relating not only to data sharing but also around setting priorities for safety resources,” Quick said.

On this issue, the team is collaborating with RSI researcher Tom Horan. That project is investigating the potential of new advances in GIS and how can it enhance the collection, availability, and use of information related to transportation safety within the tribal environment.

Data driven safety analysis help agencies make investment decisions

How many crashes on a roadway are too many? Methods available today can help transportation professionals answer a question that has plagued them for years. Advances in highway safety analysis can provide transportation agencies with the reliable information they need to make smart investments in safety improvements.

Through the Every Day Counts initiative, the Federal Highway Administration is encouraging broader use of two approaches to data-driven safety analysis—predictive and systemic—to better target highway safety investments and reduce crashes and fatalities.

“Resources are scarce these days for all agencies, so we have to use the money we have wisely to help us make the best decisions for safety, for mobility and for our communities,” said Hillary Isebrands, FHWA safety engineer.

Planning ahead with predictive approaches

Predictive approaches combine crash, roadway inventory and traffic volume data to provide more reliable estimates of an existing or proposed roadway’s expected safety performance, such as crash frequency and severity. Results of the analysis can be used in roadway safety management and project development decisions and safety countermeasure selection and evaluation.

“Predictive analysis can help quantify safety impacts similar to the ways agencies do with construction costs, traffic operations and environmental impacts,” said Jerry Roche of the FHWA Office of Safety and a leader, along with John McFadden of the FHWA Resource Center, of the EDC Data-Driven Safety Analysis Innovation Deployment Team.

Among the state highway agencies using predictive safety analysis is the Ohio Department of Transportation, which applied the technique to estimate the expected performance of three alternatives for reconstructing the I-270 and U.S. 33 interchange inulin.

The analysis provided quantitative data that helped the agency choose a preferred alternative during the project’s engineering and design stage that addressed both traffic congestion and safety. Construction of the new interchange began in spring 2015.

Taking a broad view with systemic approaches

Systemic approaches screen a road network for high risk features associated with severe crashes, such as certain types of horizontal curves, and identify low cost safety treatments, such as enhanced delineation with wider edge lines or chevrons. These techniques are particularly applicable when a significant number of crashes occur over a wide area, such as on rural and local roads, and for specific crash types, such as those involving vulnerable road users.

Newest Addition to Training Module Series Supports Safety Planning on Tribal Lands

By: Jennifer Warren, FHWA Office of Operations

The "Tribal Transportation Planning Module Training Series" provides modules for eight planning topics, designed to assist transportation professionals responsible for planning for capital, operating, and maintenance needs on tribal lands. The FHWA Office of Planning produced this series, available at: http://www.fhwa.dot.gov/planning/processes/tribal/planning_modules/, to educate tribal planners and decision makers about the tribal transportation planning process and to provide them with useful program information. The series offers modules in transportation planning, transportation programming, intergovernmental relations, and safety and asset management.

The newest module in the series is "Developing a Transportation Safety Plan," available at: http://www.fhwa.dot.gov/planning/processes/tribal/planning_modules/safety/chapter00.cfm. This module provides a brief overview of how to conduct transportation safety planning and describes how tribes can develop transportation safety plans (TSP), which are documents that identify transportation safety issues and strategies to address them. TSPs can cover multiple transportation modes (driving, bicycling, boating, etc.) and multiple types of facilities (roads, trails, water transportation, etc.). TSPs may lead to new projects or programs, renewed efforts within an existing program, or further study of specific locations or safety issues. Transportation safety planning allows tribes to take a proactive approach to prevent crashes and improve unsafe transportation conditions.

For more information on these or other tribal transportation safety resources, please contact Michelle Noch at michelle.noch@dot.gov

For more information on Tribal Transportation Planning go to: http://www.fhwa.dot.gov/planning/processes/tribal/
Game-Changing Ideas in Transportation Research

While transformative technologies in transportation often begin simply as ideas, the gap between concept and practice can be formidable. Because the greatest innovations often involve the highest risks, funding for such research can be difficult to obtain. The NCHRP Innovations Deserving Exploratory Analysis (IDEA) program helps inventors take promising but unproven ideas in transportation engineering to the next level.

The next big idea
NCHRP’s Highway IDEA program provides grants of up to $150,000 for eight to 10 projects a year. “We’re interested in high-risk but potentially game-changing concepts in transportation,” says Jon Williams, IDEA program director. The program is a complement to traditional applied research. “We want to hear the big ideas—those untested but visionary concepts that might not otherwise have a platform to develop,” he says.

Created in 1988 as part of the Strategic Highway Research Program, the IDEA program was transferred to TRB in 1992 and is now funded by state highway agencies via AASHTO. The NCHRP IDEA program, which focuses on highway transportation systems, is one of three active IDEA programs along with Transit IDEA and Rail Safety IDEA.

The NCHRP IDEA program is open to anyone with an innovative idea to solve a highway problem, and so far it has funded or approved 184 projects. Of 162 completed projects, one in six has been successfully commercialized, and many more show great promise.

“For such high-risk projects, we thought one in 10 would be a great success rate,” says Inam Jawed, a senior program officer at TRB who manages the NCHRP IDEA program. “So we feel really good about a rate of one in six.”

Reducing risk in bridge assembly
One of IDEA’s success stories involves the development of a laser measurement system to dramatically increase the efficiency of the way steel bridge girders are assembled.

Developed by Paul Fuchs of Fuchs Consulting in Leesburg, Va., the Bridge Virtual Assembly System allows fabricators to generate 3-D computer models of girders to ensure that they will fit when assembled in the field.

Virtual fitting replaces a laborious manual process that can account for as much as 15 percent of manufacturing costs. It also increases accuracy by providing digital records that are orders of magnitude more detailed than typical paper records.

“Ensuring accuracy is critical to preventing costly errors in which girders get to the field and turn out not to fit,” says Fuchs. “This system helps catch errors in the shop, before girders reach the field.”

When an error is discovered, the system provides precise and traceable documentation of what a fabricator produced, which can be critical to finding out what went wrong.

The complexity of this system required development over many years to overcome both technical and institutional hurdles. “A system like this requires buy-in from fabricators, states, and FHWA,” says Fuchs, since all three must agree on any changes to standard procedures. That’s a process that took more than 15 years, and wouldn’t have been possible without the assistance of the NCHRP IDEA program in 2007.

With an IDEA grant, Fuchs was able to test the system at the facilities of steel bridge fabricators in Pennsylvania and South Dakota, demonstrating its ability to work in a shop environment.

“The IDEA program was central to getting us where we are with the system,” says Fuchs, “especially with initial system development.”

The project also led directly to a follow-up pooled fund study in which the system could be put to the test. The system was recently used for the first time to manufacture a bridge in Tennessee, and will be used for a second production job on a bridge in Virginia.

Environmental and performance benefits with bio-asphalt
Another IDEA-funded project is helping to address two problems at once: decreasing the environmental impacts of swine farming while producing a better method for incorporating recycled tire rubber into asphalt.

While using recycled rubber in asphalt is both environmentally friendly and can improve pavement performance, mixing it with asphalt binder can be difficult. The process requires extensive grinding of the rubber, which can reduce the rubber’s performance benefits by damaging its structure. These mixtures can also require more energy for heating and pumping, making some contractors reluctant to use them.

An IDEA project has unlikely partners in an effort to improve asphalt modification.

(Continued on page 10)
IDEA-funded research by Elham Fini of North Carolina A&T State University is using swine manure to help rubber and asphalt work better together by developing a bio-binder alternative to the petroleum-based binder typically used in asphalt. “This binder reacts with the surface of rubber particles to produce a better mixture that is easier to pump and has a longer storage time,” says Fini.

The resulting bio-asphalt also reduces construction costs and ensures that rubber-based asphalt will perform more consistently. Cost savings come from both the lower costs of using recycled rubber and the fact that farmers will pay to have swine manure reclaimed, which is also very beneficial to the environment. Where typical asphalt costs around $2 a gallon, Fini’s bio-asphalt could cost as little as 50 cents a gallon.

While the environmental and cost benefits are important, the project’s main goal was to improve pavement performance. “We were looking to develop a better pavement,” says Fini. “What we found was a solution that also helps the environment.”

With the first phase of the project nearly complete, several companies are showing interest in funding further development of the product. “We hope with the help of NCHRP and industry to bring the technology closer to market,” says Fini. “The aim is not only to enhance the properties of rubber-modified asphalt but also to facilitate and promote scrap rubber application.”

Building a better bridge beam

One of the IDEA program’s most successful projects was funded by both the NCHRP IDEA program and the now closed High-Speed Rail IDEA program: developing a hybrid-composite bridge beam for highway and railroad construction. This beam combines concrete, steel, and a fiber-reinforced plastic shell to obtain the best combination of compressive strength, tensile strength, weight, and corrosion resistance.

“Fiber-reinforced polymer composites have long been used to build airplanes, boats, and anything else that benefits from the combination of high strength, light weight, and corrosion resistance,” says beam inventor John Hillman of HCB Inc. “We had the epiphany that you could combine concrete and steel with advanced composites to create a beam that’s really efficient and utilizes material in the most structurally efficient manner.”

At about one-tenth the weight of a typical precast concrete girder of the same length, the beam is far less costly to ship and much easier to erect, making it well suited to accelerated bridge construction. It also resists cracking and rusting, reduces the carbon footprint of structures by requiring fewer delivery trucks, and increases bridge service life to more than 100 years.

To date, Hillman’s hybrid-composite beam has been installed in 18 highway bridges in nine states and is receiving tremendous interest internationally. Hillman is convinced that composites will one day be as commonplace in the transportation industry as they are in other industries.

A distinct place in transportation research

Moving forward, the IDEA program will continue to play its singular role in the transportation research landscape.

“This is a unique program,” says Williams. “Instead of simply saying no to unconventional ideas that don’t fit into their research programs, transportation agencies can send them to us.”

“Generally research is funded when it looks promising or is already a proven concept,” says Iowa DOT’s Sandra Larson, chair for six years of the project panel that oversees the NCHRP IDEA program. “The IDEA program is really unique among transportation research programs in providing seed money to explore unproven ideas.”

It is also noteworthy, she adds, in its level of success. “I’m amazed by the impacts some of the products funded by the IDEA program are making,” says Larson. “The program really is making an incredible difference in the transportation world.”

A recently published report, Products with an Impact or Potential Impact on Current Highway Practice—Notable Examples (www.trb.org/Main/Blurbs/172600.aspx), highlights commercialized and other promising NCHRP IDEA products. Additional information about the NCHRP IDEA program may be found at www.trb.org/IDEA Program/IDEAHighway.aspx.

KM in Practice

What Does It Mean to Implement KM?

KM includes a range of simple and relatively low cost actions that DOT executives can consider to reduce risks, leverage available opportunities for innovation, and ensure that what employees have learned in the course of their careers is shared with newer employees and contemporaries in other organizational units. Techniques include:

- Workforce planning to identify and close gaps between needed skills and existing capabilities;
- Communities of practice that enable less experienced employees to learn from their peers;
- Expertise directories that employees can use to identify who to contact if they have a question;
- Capture of specialized knowledge from employees before they leave the organization;
- Project management methodologies that ensure project teams learn from prior experience and document lessons learned for future efforts; and
- Use of information management methods to ensure employees can quickly find the information they need to be effective.

Purpose of the Guide

This Guide was developed because KM offers promising solutions to DOT challenges, yet relatively few DOTs have implemented agency-wide approaches to KM.

The Guide is intended to help DOT leaders examine the business case for undertaking or strengthening KM in their agencies. It introduces a variety of KM tools and techniques that a DOT could apply and provides a roadmap for DOTs wishing to experiment or get started with implementing an agency-wide approach to KM. Finally, it provides links to resources that agencies can use to develop and strengthen their KM activities over time.

The guide can be viewed at: http://onlinepubs.trb.org/onlinepubs/nchrp/nchrp_rpt_813.pdf

New Mexico Tribe Deploys Innovative Contracting Method

The Pueblo of Acoma Tribe in New Mexico is requesting proposals for a suite of construction projects using the construction manager/general contractor project delivery method. The projects include major work items such as roadway construction, earthwork, retaining walls, accelerated bridge construction, interchange construction, stabilization and paving. The Pueblo of Acoma’s goal in using CM/GC is to design and build projects in a way that maximizes the amount of project work that can be accomplished with available funding.

New York Tribal Projects Dedicated

Representatives of the Seneca Nation of Indians gathered on August 21 to dedicate $32 million in road and infrastructure projects at various Seneca Nation sites in western New York. The event highlighted projects such as the NY Route 5/U.S. 20/NY Route 438 roundabout, NY Route 5/U.S. 20 Bridge, NY Route 438 Bridge and Mile Strip Road Bridge over I-90. Staff from the New York State Department of Transportation, New York State Thruway Authority, localities and FHWA also participated in the ceremony at a pocket park created next to the roundabout.

GRS-IBS Bridge Opens in Arizona

August 21 marked the grand opening of the new Dennehotso Bridge over Laguna Creek in Apache County, Arizona. Crews on the Federal Lands Highway project used geosynthetic reinforced soil-integrated bridge system technology to replace the bridge, which is on a route that serves as a local access road for the Dennehotso Navajo Chapter. The new bridge will enable the narrow stream channel to be widened, resulting in fewer flooding events.
This information is provided expressly for educational purposes. The Western TTAP hopes to inform and educate tribal communities about legislation that may impact California and Nevada tribal communities and their tribal transportation programs. The following legislation was current at the time of publication. Legislation may change or be repealed. For further information, please check the status of the legislation at the respective website sources noted below.

Due to the overwhelming number of pending transportation related bills in the California, Nevada, and Federal Legislatures we have created a downloadable file on the NIJC Website that lists each bill, the sponsor, the status, and a brief summary. To view and download the file go to: http://www.nijc.org/ttap_legislation.html

ANNOUNCEMENTS

Senate Passes Six-Year Highway & Transit Bill and Three-Month Extension
U.S. Senators on July 30 passed the “Developing a Reliable and Innovative Vision for the Economy (DRIVE) Act” 65 to 34. The measure would guarantee increased highway and public transportation investment for the next three years and distribute six years of contract authority to the states to aid in long-term transportation planning.

Shuster Eyes Highway Markup by Early October; Funding Unclear
House Transportation and Infrastructure Chairman Bill Shuster said Friday that his committee won’t mark up a multi-year highway and transit bill next week and cited the need for a funding plan from the tax-writing Ways and Means Committee to get a bill to move. Members of the Transportation and Infrastructure Committee told CQ early this week that a markup had been planned for Sept. 17. Shuster, R-Pa., confirmed that the date had been under examination for committee action. Pushing plans for a markup beyond next week reflects the difficulty of negotiations, and with the current highway funding authorization (PL 114-41) expiring Oct. 29, another short-term extension of programs is becoming more likely.
Please visit the National Indian Justice Center web site to view more upcoming transportation events. Go to: http://www.nijc.org/ttap_calendar.html

TRIBAL TRANSPORTATION PARTNERS DIRECTORY

FEDERAL

Federal Highway Administration
United States Department of Transportation
1200 New Jersey Ave, SE
Washington, DC 20590
http://www.fhwa.dot.gov/index.html

Federal Highway Administration (FHWA) is charged with the broad responsibility of ensuring that America’s roads and highways continue to be the safest and most technologically up-to-date. Although State, local, and tribal governments own most of the Nation’s highways, FHWA provides financial and technical support to them for constructing, improving, and preserving America’s highway system.

Office of Federal Lands Highway
Federal Highway Administration
1200 New Jersey Avenue, SE
Washington, DC 20590
(202) 366-9494
http://flh.fhwa.dot.gov/

The Office of Federal Lands Highway (FLH) provides program stewardship and transportation engineering services for planning, design, construction, and rehabilitation of the highways and bridges that provide access to and through federally owned lands. The primary purpose of the FLHP is to provide financial resources and technical assistance for a coordinated program of public roads that service the transportation needs of Federal and Indian lands.

Central Federal Lands Highway Division
Federal Highway Administration
12300 West Dakota Ave.
Lakewood, CO 80228
(720) 963-3500
http://www.cflhd.gov/index.cfm

The Central Federal Lands Highway Division (CFLHD) operates as part of the Federal Lands Highway Program, serving the needs of all central states. CFLHD actively administers the surveying, designing and constructing of forest highway system roads, parkways and park roads, Indian reservation roads, defense access roads, and other Federal lands roads. CFLHD also provides training, technology, deployment, engineering services, and products to other customers.

Federal Transit Administration
1200 New Jersey Avenue, SE
4th & 5th Floors East Building
Washington, DC 20590
http://www.fta.dot.gov/

FTA Region 9 Offices
Federal Transit Administration
201 Mission Street Suite 1650
San Francisco, CA 94105
(415) 744-3133
http://www.fta.dot.gov/about/region9.html

Federal Transit Administration (FTA) is one of 10 modal administrations within the U.S. Department of Transportation. Headed by an Administrator who is appointed by the President of the United States, FTA administers federal funding to support a variety of locally planned, constructed, and operated public transportation systems throughout the U.S., including buses, subways, light rail, commuter rail, streetcars, monorail, passenger ferry boats, inclined railways, and people movers.

Bureau Of Indian Affairs
There are millions of acres of land held in trust by the United States for American Indians, Indian tribes, and Alaska Natives. There are 566 federal recognized tribal governments in the United States. Developing forestlands, leasing assets on these lands, directing agricultural programs, protecting water and land rights, developing and maintaining infrastructure and economic development are all part of the agency’s responsibility. In addition, the Bureau of Indian Affairs provides education services to approximately 48,000 Indian students.

Intersection Safety Resources
To visit the web page go to:
http://safety.fhwa.dot.gov/intersection/resources/

Intersection Safety Presentations
30 and 60 minute presentations on the topic of safety at intersections. The presentation is intended to relay safety issues at intersections (including the typical types of crashes) along with some techniques to address these issues.
To view the presentations go to:
http://safety.fhwa.dot.gov/intersection/resources/intsafept092609/

Work Zone Mobility and Safety Program
Work Zone Training Compendium
The U.S. Federal Highway Administration has released a compendium of information on available work zone training and guides.
To view the training program go to:
http://www.ops.fhwa.dot.gov/wz/outreach/wz_training/index.htm

Roundabouts
Roundabouts are circular intersections. Roundabouts reduce traffic conflicts (for example, left turns) that are frequent causes of crashes at traditional intersections.
Unlike a traffic circle or a rotary, a roundabout's incoming traffic yields to the circulating traffic.
For more information visit the website at:
http://safety.fhwa.dot.gov/intersection/roundabouts/

Roundabout Outreach and Education Toolbox
This Toolbox is designed to be a highly useable, online reference that connects transportation professionals with outreach resources from across the country to help them obtain public support for roundabouts.
To utilize the tool box go to:
http://safety.fhwa.dot.gov/intersection/roundabouts/roundabouttoolbox/

Roadway Worker Safety Website
The U.S. Federal Highway Administration’s Office of Operations has launched a new page on its Work Zone Safety website designed to be a central source of data and links to information and technical resources on roadway worker safety.
To visit the website go to:
http://www.ops.fhwa.dot.gov/wz/workersafety/index.htm

Training, Tools, Guidance and Countermeasures for Locals
Local and Rural team is continuously looking for new ways to meet the needs of local and rural road owners and operators. Insuring that tools meet the needs of the users and that they have the resources and training they need to effectively use the tools is a critical part of the solution.
To visit the web site go to:
http://safety.fhwa.dot.gov/local_rural/training/

Local & Rural Road (LRR) Safety Peer-to-Peer (P2P) Program
Open to public highway agencies seeking to adequately address safety problems on their local and rural road network.
To visit the website go to:
http://safety.fhwa.dot.gov/local_rural/training/p2p/

Proven Safety Countermeasures

TRANSPORTATION PROGRAMS AND DEVELOPMENT

FHWA Resource Center
The Mission to advance transportation technologies and solutions through training, technical assistance, technology deployment, and partnerships.
For more information go to: http://www.fhwa.dot.gov/resourcecenter/

The FHWA has developed an extensive list of resources that focus specifically on the latest culvert technology. To view this list go to: http://www.scribd.com/doc/63745094/Culvert-Technologies-List

Pavement Construction and Safety Training on Demand
New free Web-based courses sponsored by the Federal Highway Administration (FHWA)
To view the courses go to: http://www.fhwa.dot.gov/publications/focus/13jul/13jul02.cfm

In partnership with the University of Texas at El Paso, two free web based training courses on Intelligent Compaction and Asphalt Stringless Paving
Intelligent Compaction: http://ctis.utep.edu/FHWA_TrainingCourse/
Stringless or GPS Based Asphalt Paving: http://ctis.utep.edu/FHWA_AsphaltString/

National Transit Institute (NTI)
Rutgers, the State University of New Jersey
• Assault Awareness and Prevention for Transit Operators course. Three hours FREE.
For more information go to: http://www.ntionline.com/courses/courseinfo.php?id=274

National Highway Institute (NHI) 2015
Transportation Asset Management (TAM) Courses.
moving Ahead for Progress in the 21st Century Act (MAP-21) mandates that all STATES must have asset management plans in place by 2015.
• 131106 Introduction to Transportation Asset Management
• 131106A Introduction to Transportation Asset Management with Workshop
• 131106B Development of a Transportation Asset Management Plan
• 131106C Introduction to the Development of a Transportation Asset Management Plan

To View the course details got to the NHI website: http://www.nhi.fhwa.dot.gov/default.aspx

National Highway Institute (NHI) 2015
Free web-based training:
• New. Introduction to FRP Materials and Applications for Concrete course 130105A
• New. Applying Section 4(f): Putting Policy into Practice course 142073.
• New. National Traffic Incident Management Responder Training course 133126.
• New. Combating Roadway Departures Course 380117.
The following updated training is available.
• New 130093W Introduction to Earthquake Engineering is a Web based prerequisite to 130093A Displacement-Based LRFD Seismic Analysis and Design of Bridges
• 132010A entitled "Earthquake Engineering Fundamentals" is a Web-based prerequisite to 132094A and 132094B. Participants will generally be notified to take the WBT course about 1 month before the following two sessions.
• 132094A entitled "LRFD Seismic Analysis and Design of Transportation Geotechnical Features".
• 132094B entitled "LRFD Seismic Analysis and Design of Structural Foundations and Earth Retaining Structures".
To view the course details go to: http://www.nhi.fhwa.dot.gov/default.aspx

National Transportation Training Resource (NTTR)
The National Transportation Training Resource (NTTR) is an online database of information about learning resources for the public-sector transportation workforce. The NTTR is a tool for training managers and frontline transportation professionals.
To visit the website go to: http://www.nttr.dot.gov/

Federal Emergency Management Agency (FEMA)
Emergency Management Institute Tribal Curriculum
To collaborate with tribal governments to build emergency management capability and partnerships to ensure continued survival of Tribal nations and communities.
To view the course go to: http://www.fema.gov/training/training-tribal-representatives

FHWA Wildlife Vehicle Collision Reduction Study Training Course
A national study was conducted on the causes and impacts of wildlife vehicle collisions (WVCs). This study also provides recommendations and solutions for reducing these collisions.
To view the course go to: www.environment.fhwa.dot.gov/WVCtraining/index.asp
National Cooperative Highway Research Program (NCHRP)
Report 667
Model Curriculum for Highway Safety Core Competencies presents course materials, including the instructor’s guide and student workbook, for a fundamental highway safety training course. The course is designed to address the core competencies highway safety practitioners should have or acquire. An accompanying CD-ROM includes a brochure and short Microsoft PowerPoint presentation for marketing the training course.
To view the report go to:

Paul S. Sarbanes Transit in Parks Technical Assistance Center (TRIPTAC)
The TRIPTAC is available to all Federal Land Management Agencies (FLMAs), not only those applying for or receiving funds from the Transit in Parks program. State, local or tribal governments who are working in collaboration with an FLMA to expand public lands access are also welcome to use TRIPTAC services to obtain alternative transportation information and assistance.
To view available training courses go to:
http://www.triptac.org/

University of California, Berkeley, Institute of Transportation Studies
Technology Transfer Program
To visit the website go to:

U.S. Small Business Administration (SBA)
Online Courses for Starting Your Business
Several free online courses are offered by the SBA to help prospective and existing entrepreneurs understand the basics about writing a business plan.
For more information go to:
http://www.sba.gov/content/online-courses-starting-your-business

Community Transportation Association of America (CTAA)
Passenger Service and Safety PASS Basic Training Program
The PASS Basic program consists of 6 modules and includes comprehensive training on the assistance that drivers should be providing to passengers with special need.
For more information go to:
http://training.ctaa.org/

Community Transportation Safety and Security Accreditation (CTSSA)
The program is designed to promote the safety and security of the customers of community and public transportation systems and also to promote the safety and security of the women and men who deliver these services and provide mobility for the riding public every day.
For more information go to:

Minnesota Local Technical assistance Program (LTAP)
Gravel Road Maintenance and Design (Online)
This course helps supervisory personnel and operators better understand the materials, techniques, and equipment needed for maintaining gravel roads.
To enroll in the course go to:
http://www.mnltap.umn.edu/training/topic/maintenance/gravel/online.html

Curbing Transit Employee Distracted Driving
The 30-minute course, was developed by FTA in conjunction with the Florida Department of Transportation. It’s an excellent tool to educate, inform, and increase awareness among all transit workers about the dangers and challenges associated with distracted driving.
For more information go to:
http://www.fta.dot.gov/newsroom/12910_14467.html

Work-Zone Safety Tutorial
Minnesota LTAP has launched a new online free tutorial that offers a convenient opportunity for new, seasonal, or temporary staff to learn about the fundamentals of work-zone safety and the basic concepts of the work-zone area before arriving at the job site. There is no cost to take the tutorial, and registration is not required.
To view the tutorial go to:
http://www.mnltap.umn.edu/training/web/workzone/
Local Assistance, Office of Active Transportation and Special Programs.

The purpose of ATP is to encourage increased use of active modes of transportation by achieving the following goals:

- Increase the proportion of trips accomplished by biking and walking,
- Increase safety and mobility for non-motorized users,
- Advance the active transportation efforts of regional agencies to achieve greenhouse gas (GHG) reduction goals,
- Enhance public health,
- Ensure that disadvantaged communities fully share in the benefits of the program, and
- Provide a broad spectrum of projects to benefit many types of active transportation users.

To view the 2015 Cycle 2 applications and progress go to: http://www.catc.ca.gov/programs/ATP.htm
For more information go to: http://www.dot.ca.gov/hq/LocalPrograms/atp/index.html

Memorandum of Understanding (MOU)
The California Department of Transportation (Caltrans), in consultation with the Governor’s Office of Small Business Advocate, have entered into a Memorandum of Understanding (MOU) with the U.S. Small Business Administration (SBA), to offer a technical assistance surety bond guarantee program to promote increased small business participation in this initiative provides a viable means to advance the unimpeded participation of all willing, ready, and able construction contractors and subcontractors, professional architectural and engineering firms, suppliers and truckers, without regard to race, ethnicity, gender, or physical disability to participate in the State’s Contracting Program. For more information contact a Small Business Development Center in your area, or call Linda Madden 919-324-8384; e-mail Linda_Madden@dot.ca.gov

California Department of Resources Recycling and Recovery (CalRecycle)
CalRecycle offers a variety of grant funding opportunities to assist public and private entities in safely and effectively managing California’s waste stream.

Application materials forthcoming:

- Beverage Container Recycling Grants.
- Legacy Disposal Site Abatement Partial Grant Program. FY 2015-2016 applications due November 5, 2015
TRIBAL TRANSPORTATION FUNDING RESOURCES

FUNDING (continued)

and February 4, 2016.

- Waste Tire Cleanup grants. FY 2016/17 will tentatively be available winter 2015.
- Rubberized Pavement (TRP) Grant Program. FY 2015-16 applications due December 2015.
- Tire-Derived Aggregate (TDA) Grant Program. FY 2015-16 will tentatively be available Fall 2015
- Tire-Derived Product Grant Program.. FY 2015-2016 applications due October 15, 2015

Additional grant information and list of active grants can be found at:
http://www.calrecycle.ca.gov/Funding/

Highway Safety Improvement Program (HSIP)

It is never too early for local agencies to analyze their roadway network to 1) identify their highest crash locations and corridors, 2) consider effective and efficient countermeasures to improve the safety of these locations/corridors, and 3) identify projects that have the highest Benefit-to-Cost ratios. Cycle 8 date to be determined.
http://www.dot.ca.gov/hq/LocalPrograms/HSIP/prepare_now.htm

Sustainable Transportation Planning Grant Program

The program was created to support the California Department of Transportation’s (Caltrans) current Mission: Provide a safe, sustainable, integrated and efficient transportation system to enhance California’s economy and livability.
Deadline to apply for FY 2016-2017 is October 30, 2015
For more information go to:
http://www.dot.ca.gov/hq/tpp/grants.html

NEVADA

Nevada Department of Transportation (NDOT)

Transportation Alternatives Program (TAP)
The Nevada TAP provides federal transportation funds for projects that improve non-motorized mobility, historic preservation, scenic accessibility, safe routes to school (SRTS) and environmental/vegetation management. FY 2015 funding to be determined.
For more information go to:
http://www.nevadadot.com/tap/

Nevada Transportation Enhancement Program
The Nevada Department of Transportation (NDOT) and the Federal Highway Administration (FHWA) share your interest in these projects and others that enhance the transportation experience in your area and make our communities more livable. The TE program was developed to fund projects that go beyond where typical transportation projects usually stop.

Applications due the second Monday each March
For more information go to:
http://www.nevadadot.com/Projects_and_Programs/Landscape_and_Aesthetics/Landscape_Aesthetics_Program.aspx

FEDERAL

U.S. DEPARTMENT OF TRANSPORTATION

Transportation Alternatives Program (TAP)
- Safe Routes to School Program.
- National Scenic Byways
The Moving Ahead for Progress in the 21st Century Act (MAP-21) authorized the Transportation Alternatives Program (TAP) to provide funding for programs and projects defined as transportation alternatives, including on- and off-road pedestrian and bicycle facilities, infrastructure projects for improving non-driver access to public transportation and enhanced mobility, community improvement activities, and environmental mitigation; recreational trail projects; safe routes to school projects; and projects for planning, designing, or constructing boulevards and other roadways largely in the right-of-way of former divided highways. The TAP replaced the funding from pre-MAP-21 programs including the Transportation Enhancement Activities, Recreational Trails Program.
For more information go to:
http://www.fhwa.dot.gov/environment/transportation_alternatives/

RFP: IDEA Program Announcement 2015:
TRB’s Innovations Deserving Exploratory Analysis (IDEA) annual program announcement solicits funding proposals for the upcoming review cycles. The announcement explains the IDEA programs, describes the types of eligible projects and their funding structures, suggests general areas for which IDEA proposals can be submitted, and provides guidelines and forms for submitting proposals.
- The Transit IDEA program has two review cycles in 2015; Transit IDEA proposals are due May 1st and November 2nd, depending on which of the two funding cycles is targeted.
- NCHRP IDEA proposals are due March 1st and September 1st, depending on which of the two funding cycles is targeted.
If the proposal submission due date for any IDEA program falls over a weekend or on a federal holiday, the due date automatically moves to the next business day. The IDEA programs provide start-up funding for promising, but unproven, innovations in surface transportation systems. The programs’ goals are to seek out and support new transportation solutions that are unlikely to be funded through traditional sources.
Top 3 Criteria by Which Selection Committees Evaluate IDEA Proposals:
1. **Innovation** -- Emphasize the innovation. Say it first, say it fast, and make it clear. What problem does your project address? How is your solution better than current practice?
2. **Benefits** -- Describe the expected benefits. Why is this project worth investing in?
3. **Science** -- Stick to the science. Be sure the research approach is sound and sensible

**FHWA**

**Strategic Highway Research Program (SHRP2)**
The objective of the SHRP2 Education Connection is to incorporate SHRP2 products into collegiate level lesson plans and curricula. FHWA anticipates awarding up to 10 cooperative agreements to help professors and instructors bring state of the practice solutions to their classrooms.

**Round 7** will open Spring 2016.
For more information go to: [http://www.fhwa.dot.gov/goshrp2/](http://www.fhwa.dot.gov/goshrp2/)

**Accelerated Innovation Deployment Demonstration (AID)**
The final notice announces the availability of funding and requests grant applications for FHWA's Accelerated Innovation Deployment (AID) Demonstration authorized within the Technology and Innovation Deployment Program (TIDP) under the Moving Ahead for Progress in the 21st Century Act (MAP-21).

Consistent with other FHWA funding provided to tribes, federally recognized tribe identified on the list of "Indian Entities Recognized and Eligible to Receive Services from the Bureau of Indian Affairs" (published at 77 FR 47868) is eligible to apply for AID Demonstration.

All applications will be evaluated on a rolling basis and be assigned a rating of “Qualified” or “Not Qualified.”

Indian Housing Block Grant Program (IHBG)

Funds appropriated by Congress for the Indian Housing Block Grant Program (IHBG) are made available to eligible grant recipients through a formula. Regulations governing the formula can be found at **24 CFR Part 1000**.

Subpart D. On April 20, 2007, the Native American Housing Assistance and Self Determination Final Rule was published revising the IHBG Formula.

In brief, the formula has two components; Need and Formula Current Assisted Stock. The Need component considers population, income, and housing conditions. The Formula Current Assisted Stock component reflects housing developed under the United States Housing Act (the predecessor of the IHBG program) which is owned and/or operated by the IHBG recipient and provides funds for ongoing operation of the housing.

An Indian tribe may challenge the Need portion of the IHBG formula provided the data are gathered, evaluated, and presented in a manner that is fair and equitable for all participating tribes. Tribes have until March 30 of each year to submit challenges to their Needs data in consideration for the upcoming fiscal year.

**Department of Health and Human Services**

NICHD Consortium for Research on Pediatric Trauma and Injury Prevention (R24).

The purpose of this funding opportunity announcement (FOA) is to encourage multidisciplinary collaborations to target gaps in research on pediatric trauma and injury prevention.

The team science approach encouraged by this FOA could be used to generate a research resource, which may include discovery-based or hypothesis-generative approaches, to advance the relevant area of biomedical research or to devise breakthrough ideas, concepts and approaches to therapies in pediatric trauma and injury prevention research.

**Deadline to apply:** January 7, 2017
To view the announcement go to: [http://www.grants.gov/web/grants/view-opportunity.html?oppId=261949](http://www.grants.gov/web/grants/view-opportunity.html?oppId=261949)

**TRIBAL TRANSPORTATION FUNDING RESOURCES**
Southwest Transportation Workforce Center

The Southwest Transportation Workforce Center (SWTWC) is dedicated to connecting and empowering the 21st Century transportation workforce. SWTWC builds strategic partnerships and engages regional and national stakeholders to develop skilled and career-ready transportation workforce throughout SWTWC’s eight member states—California, Nevada, Arizona, New Mexico, Colorado, Utah, Texas, and Oklahoma.

Center Activities:
- Perform labor market analysis and identify workforce and training needs for various transportation sectors
- Evaluate the effectiveness of existing educational materials
- Establish a resource clearinghouse for educators, employers, and those on the transportation career pathway

Focus areas
Corridor management and ITS (freight and people), gateways (ports, airports, border crossings), and language acquisition.
